# LEVERAGE

**Financial (DFL)**  
occurs due to fixed financial cost  
eg - Interest

**Operational (DOL)**  
occurs due to fixed operational cost. eg - rent, depreciation, salary

**Combined (DCL)**

occurs due to both, fixed financial cost and operational cost

Example -

(1) With fixed cost

|   | Before                                 | +ve     | -ve     |
|---|--|---------|---------|
| Sale  | 10,000 $\xrightarrow{2 \text{ times}}$ | 20,000  | 5,000   |
| (-) Variable cost                                     | (3,000)                                | (6,000) | (1,500) |
| contribution  | 7,000                                  | 14,000  | 3,500   |
| (-) fixed cost<br>$\hookrightarrow$ eg - rent, salary | (4,000)                                | (4,000) | (4,000) |
| EBIT  | 3,000                                  | 10,000  | (500)   |

$\xrightarrow{\text{more than 3 times}}$

(2) Without fixed cost

|                   |  |         |
|-------------------|--|---------|
| Sale              | 10,000 $\xrightarrow{2 \text{ times}}$ | 20,000  |
| (-) Variable cost | (3,000)                                | (6,000) |
| contribution      | 7,000                                  | 14,000  |
| (-) fixed cost    | (0)                                    | (0)     |
| EBIT              | 7,000                                  | 14,000  |

$\xrightarrow{2 \text{ times}}$

$$DOL = \frac{\text{Contri}}{EBIT}$$

$$\therefore, (1) DOL = \frac{7,000}{3,000} = 2.33 \text{ times}$$

$$3000 + 2.33 (3,000) = 10,000$$

↪ increased by 2.33 times

$$(2) DOL = \frac{7,000}{7,000} = 1 \text{ time}$$

When fixed cost is zero, DOL would always be '1'

(3) high fixed cost

|                   |         |         |
|-------------------|---------|---------|
| Sale              | 10,000  | 20,000  |
| (-) Variable Cost | (3,000) | (6,000) |
| contribution      | 7,000   | 14,000  |
| (-) fixed cost    | (6,000) | (6,000) |
| EBIT              | 1,000   | 8,000   |

$$DOL = \frac{7,000}{1,000} = 7 \text{ times}$$

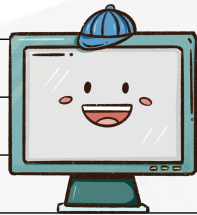

conclusion

| fixed Cost | DOL        |
|------------|------------|
| 1. 4,000   | 2.33 times |
| 2. 6,000   | 7 times    |

If fixed cost increases DOL increases. Hence, leverage more, risk is more.

## Summary

Companies like PVR, Air India having high fixed cost like rent, interest, salary will have more leverage. Although there is no sale during covid, still all such fixed cost remain constant. Hence, company is taking high risk. As an investor we should prefer to invest in a company having low fixed cost as well as low leverage.

## Case Study

Air India - 1,000 aircrafts

|                    |                            |
|--------------------|----------------------------|
| Debt. - 10,000 Cr. | Adverse impact of leverage |
| ROI - 18%          | ROI - 6%                   |
| Int. - 10%         | Int. - 10%                 |
| Profit - 8%        | loss - (4%)                |

## Interpretation of leverage.

|         |        |               |        |
|---------|--------|---------------|--------|
| DFL     | ज्याका | DOL           | ज्याका |
| Debt.   | ज्याका | fixed cost    | ज्याका |
| Int.    | ज्याका | Rent / Salary | ज्याका |
| Risk    | ज्याका | Risk          | ज्याका |
| Benefit | ज्याका | Profit        | ज्याका |
| Profit  | ज्याका |               |        |

Let's understand  $\Delta OL$ ,  $\Delta FL$ ,  $\Delta CL$  with the help of following example

|                            | FY 23   | FY 24   | Change |
|----------------------------|---------|---------|--------|
| Sale                       | 20,000  | 24,000  | 20%    |
| (-) Variable Cost<br>(30%) | (6,000) | (7,200) | 20%    |
| contribution               | 14,000  | 16,800  | 20%    |
| (-) fixed cost             | (4,000) | (4,000) | 0%     |
| EBIT                       | 10,000  | 12,800  | 28%    |
| (-) Interest               | (5,000) | (5,000) | 0%     |
| EBT                        | 5,000   | 7,800   | 56%    |

Answer :-

$$\begin{aligned} \Delta OL (F_1) &= \frac{\text{Contribution}}{\text{EBIT}} \\ &= \frac{14,000}{10,000} \\ &= 1.4 \end{aligned}$$

$$\begin{aligned} \Delta OL (F_2) &= \frac{\% \text{ change in EBIT}}{\% \text{ change in Sales}} \\ &= \frac{28\%}{20\%} \\ &= 1.4 \end{aligned}$$

$$\begin{aligned} \Delta FL (F_1) &= \frac{\text{EBIT}}{\text{EBT}} \\ &= \frac{10,000}{5,000} \\ &= 2 \end{aligned}$$

$$\begin{aligned} \Delta FL (F_2) &= \frac{\% \text{ change in EBT}}{\% \text{ change in EBIT}} \\ &= \frac{56\%}{28\%} \\ &= 2 \end{aligned}$$

$$\begin{aligned} \Delta CL &= \Delta OL \times \Delta FL \\ &= 1.4 \times 2 \\ &= 2.8 \end{aligned}$$

$$\Delta CL (F_1) = \frac{\text{Contri}}{\text{EBIT}} \times \frac{\text{EBIT}}{\text{EBT}}$$

$$\begin{aligned} \Delta CL (F_2) &= \frac{\% \text{ change in EBIT}}{\% \text{ change in Sales}} \times \frac{\% \text{ change in EBT}}{\% \text{ change in EBIT}} \\ &= 1.4 \times 2 \\ &= 2.8 \end{aligned}$$

$$DCL = \frac{\text{Contri}}{EBT}$$

$$(F_1)$$

$$= \frac{14,000}{5,000}$$

$$= 2.8$$

$$DCL = \frac{\% \text{ change in EBT}}{\% \text{ change in Sales}}$$

$$(F_2)$$

$$= \frac{56\%}{20\%}$$

$$= 2.8$$

## QUESTION

|        |             |         |                |

**Q.3** A firm's details are as under:

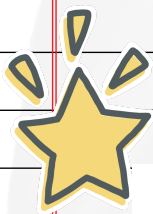

|                       |             |
|-----------------------|-------------|
| Sales (@100 per unit) | 24,00,000   |
| Variable Cost         | 50%         |
| Fixed Cost            | ₹ 10,00,000 |

It has borrowed ₹ 10,00,000 @ 10% p.a. and its equity share capital is ₹ 10,00,000 (₹ 100 each).

Consider tax @ 50 %. CALCULATE:

- (a) Operating Leverage
- (b) Financial Leverage
- (c) Combined Leverage
- (d) Return on Investment
- (e) If the sales increases by ₹ 6,00,000; what will the new EBIT?

| Date : | N.B. Pg. No | Stars : | Practical Q4 |
|--------|-------------|---------|--------------|

**Q.8** The capital structure of PS Ltd. for the year ended 31st March 2021 consisted as follows:

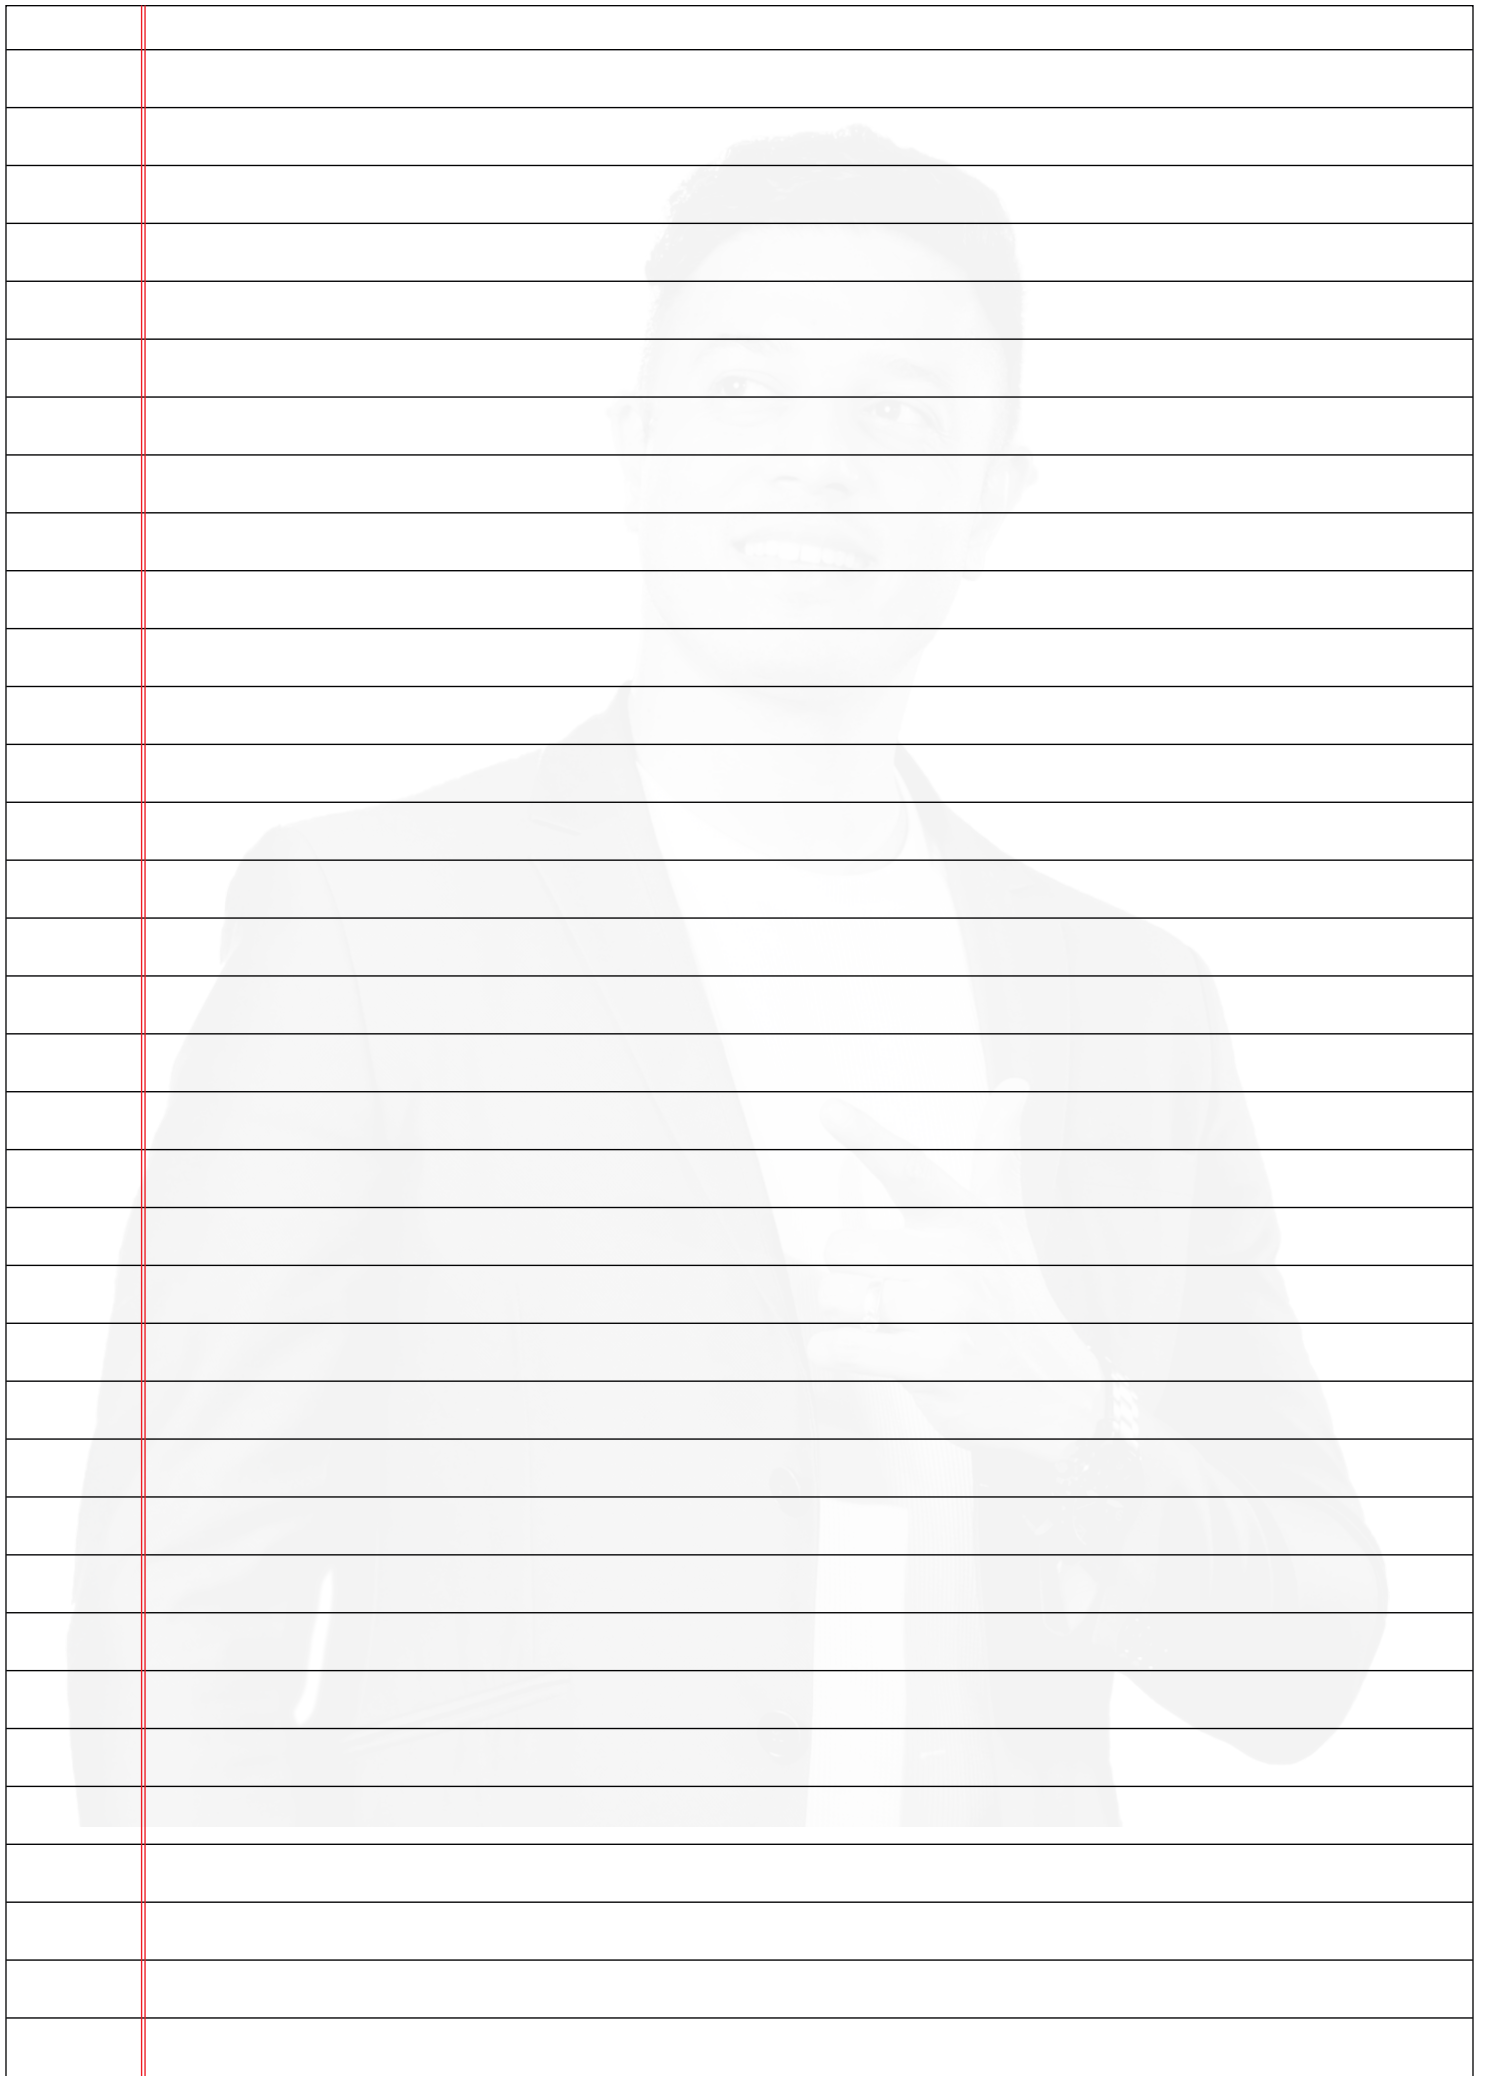

| Particulars                                  | Amount in (₹) |
|--|---------------|
| Equity share capital (face value ₹ 100 each) | 10,00,000     |
| 10% debentures (₹ 100 each)                  | 10,00,000     |

During the year 2020-21, sales decreased to 1,00,000 units as compared to 1,20,000 units in the previous year. However, the selling price stood at ₹ 12 per unit and variable cost at ₹ 8 per unit for both the years. The fixed expenses were at ₹ 2,00,000 p.a. and the income tax rate is 30%.

You are required to CALCULATE the following:

- The degree of financial leverage at 1,20,000 units and 1,00,000 units.
- The degree of operating leverage at 1,20,000 units and 1,00,000 units.
- The percentage change in EPS.

| Output             | 1,00,000 units at normal capacity |
| Selling price/unit | ₹ 40                              |
| Variable Cost/unit | ₹ 20                              |
| Fixed cost         | ₹ 1,00,000                        |

The Capital Structure of the Company as on 31st March 2022 is as follows:

| Particulars  | ₹         |
|--|-----------|
| Equity Share Capital (1,00,000 shares of ₹10 each) | 10,00,000 |
| Reserves and Surplus                               | 5,00,000  |
| 7% Debentures                                      | 10,00,000 |
| Current Liabilities                                | 5,00,000  |
| Total  | 30,00,000 |

Navya Ltd. has decided to undertake an expansion project to use the market potential, that will involve ₹ 10 lakhs. The company expects an increase in output by 50%. Fixed cost will be increased by ₹ 5,00,000 and variable cost per unit will be decreased by 10%. The additional output can be sold at the existing selling price without any adverse impact on the market. The following alternative schemes for financing the proposed expansion

programme are planned:

- (i) Entirely by equity shares of ₹10 each at par.
- (ii) ₹ 5 lakh by issue of equity shares of ₹ 10 each and the balance by issue of 6% debentures of ₹100 each at par.
- (iii) Entirely by 6% debentures of ₹ 100 each at par.

FIND out which of the above-mentioned alternatives would you recommend for Navya Ltd. with reference to the risk and return involved, assuming a corporate tax of 40%.

**Q.35** The capital structure of PS Ltd. for the year ended 31st March, 2020 consisted as follows:

| Particulars                                  | Amount in ₹ |
|--|-------------|
| Equity share capital (face value ₹ 100 each) | 10,00,000   |
| 10% debentures (₹ 100 each)                  | 10,00,000   |

During the year 2019-20, sales decreased to 1,00,000 units as compared to 1,20,000 units in the previous year. However, the selling price stood at ₹ 12 per unit and variable cost at ₹ 8 per unit for both the years. The fixed expenses were at ₹ 2,00,000 p.a. and the income tax rate is 30%.

You are required to CALCULATE the following:

- The degree of financial leverage at 1,20,000 units and 1,00,000 units.
- The degree of operating leverage at 1,20,000 units and 1,00,000 units.
- The percentage change in EPS.

# CHAPTER-1

## FINANCING DECISIONS – LEVERAGES

**Q.4** The following information is related to Yizi Company Ltd. for the year ended 31st March, 2021:

|                                     |            |
|-------------------------------------|------------|
| Equity shares capital (of ₹10 each) | 50 lakhs   |
| 12% Bonds of ₹ 1,000 each           | 37 lakhs   |
| Sales                               | 84 lakhs   |
| Fixed cost (excluding interest)     | 6.96 lakhs |
| Financial leverage                  | 1.49       |
| Profit-volume Ratio                 | 27.55%     |
| Income Tax Applicable               | 40%        |

You are required to CALCULATE:

- (i) Operating Leverage; (ii) Combined leverage; and (iii) Earnings per share.  
Show calculations up-to two decimal points.

**Ans:** Computation of profit after Tax (PAT)

| Particulars                                   | (₹)        |
|---|------------|
| Sales   | 84,00,000  |
| Contribution (Sales x P/V) ratio              | 23,14,200  |
| Less: Fixed cost (excluding interest)         | (6,96,000) |
| EBIT (Earning before interest and tax)        | 16,18,200  |
| Less: Interest on debentures (12% x ₹37 lakh) | 4,44,000   |
| Less: Other fixed interest (balancing figure) | (88,160)*  |
| EBT (Earnings before tax)                     | 10,86,040  |
| Less: Tax @ 40%                               | 4,34,416   |
| PAT(Profit after tax)                         | 6,51,624   |

- (i) Operating Leverage:

$$= \frac{\text{Contribution}}{\text{EBIT}} = \frac{23,14,200}{16,18,200} = 1.43$$

- (ii) Combined Leverage:

$$= \text{Operating Leverage} \times \text{Financial Leverage}$$
$$= 1.43 \times 1.49 = 2.13$$

OR,

$$\text{Combined Leverage} = \frac{\text{Contribution}}{\text{EBIT}} \times \frac{\text{EBIT}}{\text{EBT}}$$

$$\text{Combined Leverage} = \frac{\text{Contribution}}{EBT} \times \frac{\text{₹23,14,200}}{\text{₹10,86,040}} = 2.13$$

$$\text{Financial Leverage} = \frac{EBIT}{EBT} = \frac{16,18,200}{EBT} = 1.49$$

$$\text{So, EBT} = \frac{16,18,200}{1.49} = ₹ 10,86,040$$

Accordingly, other fixed interest = ₹ 16,18,200 – ₹ 10,86,040 – ₹ 4,44,000  
= 88,160

(iii) Earnings per share (EPS):]

$$= \frac{PAT}{\text{No. of shares outstanding}} = \frac{₹6,51,624}{5,00,000 \text{ equity shares}} = ₹1.30$$

## Q.5

Following are the selected financial information of A Ltd. And B Ltd. For the current Financial Year.

| Particulars         | A Ltd.  | B. Ltd.   |
|---------------------|---------|-----------|
| Variable Cost Ratio | 60%     | 50%       |
| Interest            | ₹20,000 | ₹1,00,000 |
| Operating Leverage  | 5       | 2         |
| Financial Leverage  | 3       | 2         |
| Tax Rate            | 30%     | 30%       |

You are required to FIND out:

- EBIT
- Sales
- Fixed Cost
- Identify the company which is better placed with reasons based on leverages.

Ans: **Company A**

$$(i) \quad \text{Financial Leverage} = \frac{EBIT}{EBT \text{ i.e. } EBIT - \text{Interest}}$$

$$\text{So, } 3 = \frac{EBIT}{EBIT - ₹20,000}$$

$$\begin{aligned} \text{Or, } 3 (EBIT - 20,000) &= EBIT \\ \text{Or, } 2 \text{ EBIT} &= 60,000 \\ \text{Or, EBIT} &= 30,000 \end{aligned}$$

$$(ii) \quad \text{Operating Leverage} = \frac{\text{Contribution}}{EBIT} \text{ Or, } 5 = \frac{\text{Contribution}}{₹30,000}$$

$$\text{Or, Contribution} = ₹1,50,000$$

$$\text{Sales} = \frac{\text{Contribution}}{P/V \text{ Ratio } (1 - \text{variable cost ratio})} = \frac{₹1,50,000}{40\%} = ₹3,75,000$$

$$\begin{aligned} (iii) \quad \text{Fixed Cost} &= \text{Contribution} - \text{EBIT} \\ &= ₹ 1,50,000 - 30,000 \\ \text{Or, Fixed Cost} &= ₹ 1,20,000 \end{aligned}$$

## Company B

$$(i) \quad \text{Financial Leverage} = \frac{EBIT}{EBT \text{ i.e. } EBIT - \text{Interest}}$$

$$\text{So, } 2 = \frac{EBIT}{EBIT - ₹1,00,000}$$

$$\begin{aligned} \text{Or, } 2 (EBIT - ₹1,00,000) &= EBIT \\ \text{Or, } 2 EBIT - ₹2,00,000 &= EBIT \\ \text{Or, } EBIT &= ₹2,00,000 \end{aligned}$$

$$(ii) \quad \text{Operating Leverage} = \frac{\text{Contribution}}{EBIT}$$

$$\text{Or, } 2 = \frac{\text{Contribution}}{₹2,00,000}$$

$$\text{Or, Contribution} = ₹4,00,000$$

$$\text{Sales} = \frac{\text{Contribution}}{P/V \text{ Ratio } (1 - \text{variable cost ratio})} = \frac{₹4,00,000}{50\%} = ₹8,00,000$$

$$\begin{aligned} (iii) \quad \text{Fixed Cost} &= \text{Contribution} - EBIT \\ &= ₹4,00,000 - ₹2,00,000 \\ \text{Or, Fixed Cost} &= ₹2,00,000 \end{aligned}$$

|   | Company A<br>(₹) | Company B<br>(₹) |
|---|------------------|------------------|
| Sales                                   | 3,75,000         | 8,00,000         |
| Less:                                   | 2,25,000         | 4,00,000         |
| Contribution                            | 1,50,000         | 4,00,000         |
| Less: Fixed Cost                        | 1,20,000         | 2,00,000         |
| Earnings before interest and tax (EBIT) | 30,000           | 2,00,000         |
| Less: Interest                          | 20,000           | 1,00,000         |
| Interest before tax (EBT)               | 10,000           | 1,00,000         |
| Less: Tax @ 30%                         | 3,000            | 30,000           |
| Earnings after tax (EAT)                | 7,000            | 70,000           |

### Comment based on Leverage

Comment based on leverage – Company B is better than company A of the following reasons:

- Capacity of Company B to meet interest liability is better than that of companies A (from EBIT/interest ratio)

$$[A = \frac{₹30,000}{₹20,000} = 1.5 \quad B = \frac{₹20,000}{₹1,00,000} = 2]$$

- Company B has the least financial risk as the total risk (business and financial) of company B is lower (combined leverage of Company A-15 and Company B-4)

Q.13 CALCULATE the operating leverage, financial leverage and combined leverage from the following data under Situation I and II and Financial Plan A and B:

|                             |                     |
|-----------------------------|---------------------|
| Installed capacity          | 4,000 units         |
| Actual production and sales | 75% of the capacity |
| Selling Price               | ₹30 per unit        |
| Variable Cost               | ₹15 per unit        |

**Fixed Cost:**

|                    |        |
|--------------------|--------|
| Under Situation I  | 15,000 |
| Under Situation II | 20,000 |

**Capital Structure:**

|                | Financial Plan |        |
|----------------|----------------|--------|
|                | A (₹)          | B (₹)  |
| Equity         | 10,000         | 15,000 |
| Debt (ROI 20%) | 10,000         | 5,000  |
|                | 20,000         | 20,000 |

Ans: (i) Operating Leverage (OL)

|  | Situation-I                     | Situation-II                    |
|--|---------------------------------|---------------------------------|
|  | (₹)                             | (₹)                             |
| Sales (3000 units @ 30 percent unit)       | 90,000                          | 90,000                          |
| Less: Variable Cost (@15 percent unit)     | 45,000                          | 45,000                          |
| Contribution (C)                           | 45,000                          | 45,000                          |
| Less: Fixed Cost                           | 15,000                          | 20,000                          |
| EBIT                                       | 30,000                          | 25,000                          |
| Operating Leverage (OL) = $\frac{C}{EBIT}$ | $\frac{45,000}{30,000}$<br>=1.5 | $\frac{45,000}{25,000}$<br>=1.8 |

(ii) Financial Leverage (FL)

|  | A (₹)                            | B (₹)                             |
|--|----------------------------------|-----------------------------------|

| EBT  | 23,000                           | 24,000                           |
| Financial Leverage (FL) $= \frac{EBIT}{EBT}$ | $\frac{25,000}{23,000}$<br>=1.09 | $\frac{25,000}{24,000}$<br>=1.04 |

**(iii) Combined Leverage (CL)**

|                     | A             | B              |
|---------------------|---------------|----------------|
| <b>Situation-I</b>  |               |                |
| CL = FL x OL        | 1.5x1.07=1.61 | 1.5x1.03=1.55  |
| <b>Situation-II</b> |               |                |
| CL x FL x OL        | 1.8x1.09=1.96 | 1.8x1.04=1.872 |

Q.18 From the following information prepare income statement of Company A and B “

| Particulars         | Company A | Company B |
|---------------------|-----------|-----------|
| Margin of safety    | 0.20      | 0.25      |
| Interest            | 3,000     | 2,000     |
| Profit volume ratio | 25%       | 33.33%    |
| Financial leverage  | 4         | 3         |
| Tax Rate            | 45%       | 45%       |

**Ans: Income Statement**

| Particulars         | Company A<br>(₹) | Company B<br>(₹) |
|---------------------|------------------|------------------|
| Sales               | 80,000           | 36,000           |
| Less: Variable Cost | 60,000           | 24,000           |
| Contribution        | 20,000           | 12,000           |
| Less: Fixed Cost    | 16,000           | 9,000            |
| EBIT                | 4,000            | 3,000            |
| Less: Interest      | 3,000            | 2,000            |
| EBT                 | 1,000            | 1,000            |
| Tax (45%)           | 450              | 450              |
| EAT                 | 550              | 550              |

**Workings:**

**(i) Company A**

$$\begin{aligned}
 \text{Financial Leverage} &= \text{EBIT} / (\text{EBIT} - \text{Interest}) \\
 4 &= \text{EBIT} / (\text{EBIT} - ₹3,000) \\
 4\text{EBIT} - ₹12,000 &= \text{EBIT}
 \end{aligned}$$

$$3\text{EBIT} = ₹ 12,000$$

$$\text{EBIT} = ₹ 4,000$$

### **Company B**

$$\text{Financial Leverage} = \text{EBIT}/(\text{EBIT} - \text{interest})$$

$$3 = \text{EBIT}/(\text{EBIT} - ₹ 2,000)$$

$$3\text{EBIT} - ₹ 6000 = \text{EBIT}$$

$$2\text{EBIT} = ₹ 6,000$$

$$\text{EBIT} = ₹ 3,000$$

### **(ii) Company A**

$$\text{Operating Leverage} = 1/\text{Margin of Safety}$$

$$= 1/0.20 = 5$$

$$\text{Operating Leverage} = \text{Contribution}/\text{EBIT}$$

$$5 = \text{Contribution} / ₹ 4,000$$

$$\text{Contribution} = ₹ 20,000$$

### **Company B**

$$\text{Operating Leverage} = 1/\text{Margin of Safety}$$

$$= 1/0.25 = 4$$

$$\text{Operating Leverage} = \text{Contribution}/\text{EBIT}$$

$$\text{Operating Leverage} = \text{Contribution}/\text{EBIT}$$

$$4 = \text{Contribution} / ₹ 3,000$$

$$\text{Contribution} = ₹ 12,000$$

### **(iii) Company A**

$$\text{Profit Volume Ratio} = 25\% \text{ (Given)}$$

$$\text{Profit Volume Ratio} = \text{Contribution}/\text{Sales} \times 100$$

$$25\% = ₹ 20,000/\text{Sales}$$

$$\text{Sales} = ₹ 20,000/25\%$$

$$\text{Sales} = ₹ 80,000$$

### **Company B**

$$\text{Profit Volume Ratio} = 33.33\%$$

$$\text{Therefore, Sales} = ₹ 12,000/33.33\%$$

$$\text{Sales} = ₹ 36,000$$

# Ch 6

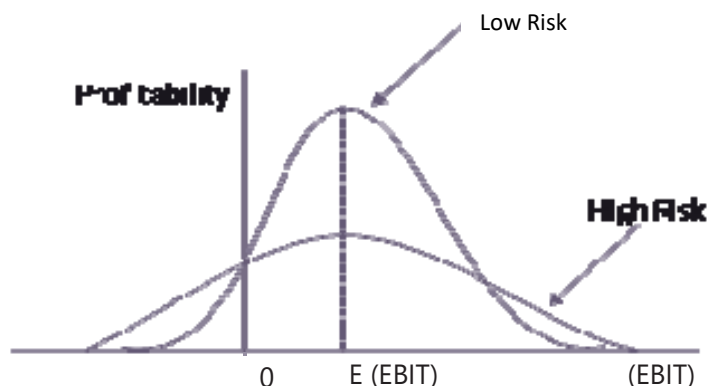

## Leverage

### 1 Introduction

- A firm can finance its operations through common and preference shares, with retained earnings, or with debt. Usually a firm uses a combination of these financing instruments.
- Capital structure refers to a firm's debt-to-equity ratio, which provides insight into how risky a company is. Capital structure decisions by firms will have an effect on the expected profitability of the firm, the risks faced by debt holders and shareholders, the probability of failure, the cost of capital and the market value of the firm.

#### 1.1 Business Risk and Financial Risk

- Risk facing the common shareholders is of two types, namely business risk and financial risk. Therefore, the risk faced by common shareholders is a function of these two risks, i.e. Business Risk, Financial Risk
- a) **Business Risk** : It refers to the risk associated with the firm's operations. It is the uncertainty about the future operating income (EBIT), i.e. how well can the operating incomes be predicted ?
- Business risk can be measured by the standard deviation of the Basic Earning Power ratio.

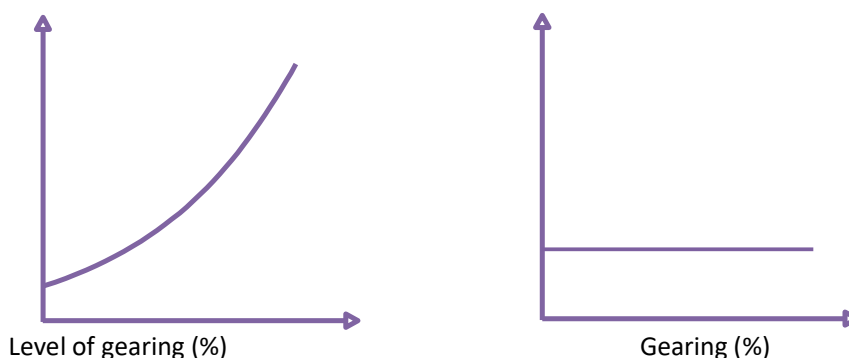

- b) **Financial Risk** : It refers to the additional risk placed on the firm's shareholders as a result of debt use i.e. the additional risk a shareholder bears when a company uses debt in addition to equity financing. Companies that issue more debt instruments would have higher financial risk than companies financed mostly or entirely by equity.

| Risk           | Business Risk  | Financial Risk  |
|----------------|--|---|
| a) Meaning     | It is associated with firm's operation's, and refers to the uncertainty about future Net Operating Income (EBIT) | It is the additional risk placed on Equity Shareholders due to the use of Debt Funds. |
| b) Measurement | It can be measured by the standard deviation of the Basic Earning power, i.e. ROCE.                              | It can be measured using ratios like leverage multiplier, Debt to assets, etc.        |
| c) Linked to   | Economic Climate.  | Use of Debt Funds.  |

| Risk         | Business Risk  | Financial Risk   |
|--------------|--|--|
| d) Reduction | Every firm would be susceptible to business risk due to changes in the overall economic climate & business operating conditions. | A firm which is entirely financed by equity (i.e. an unlevered firm) will have almost no financial risk. |

## 2 Debt versus Equity Financing

- Financing a business through borrowing is cheaper than using equity. This is because :
  - Lenders require a lower rate of return than ordinary shareholders. Debt financial securities present a lower risk than shares for the finance providers because they have prior claims on annual income and liquidation.
  - A profitable business effectively pays less for debt capital than equity for another reason: the debt interest can be offset against pre-tax profits before the calculation of the corporate tax, thus reducing the tax paid.
  - Issuing and transaction costs associated with raising and servicing debt are generally less than for ordinary shares.
- These are some benefits from financing a firm with debt. Still firms tend to avoid very high gearing levels.
- One reason is financial distress risk. This could be induced by the requirement to pay interest regardless of the cash flow of the business. If the firm goes through a rough period in its business activities it may have trouble paying its bondholders, bankers and other creditors their entitlement.
- The relationship between Expected return (Earnings per share) and the level of gearing can be represented as :

Relationship between leverage and risk

- Leverage can occur in either the operating or financing portions of the income statement.
- The effect of leverage is to magnify the effects of changes in sales volume on earnings. Let's now discuss in detail Operating, Financing and Combined Leverages.

## 3 MEANING AND TYPES OF LEVERAGE

### 1.3.1 Meaning of Leverage

- Leverage refers to the ability of a firm in employing long term funds having a fixed cost, to enhance returns to the owners. In other words, leverage is the amount of debt that a firm uses to finance its assets. A firm with a lot of debt in its capital structure is said to be highly levered. A firm with no debt is said to be unlevered.
- The term Leverage in general refers to a relationship between two interrelated variables. In financial analysis it represents the influence of one financial variable over some other related financial variable. These financial variables may be costs, output, sales revenue, Earnings Before Interest and Tax (EBIT), Earning per share (EPS) etc.

### 3.2 Types of Leverage

There are three commonly used measures of leverage in financial analysis. These are :

- Operating Leverage
- Financial Leverage

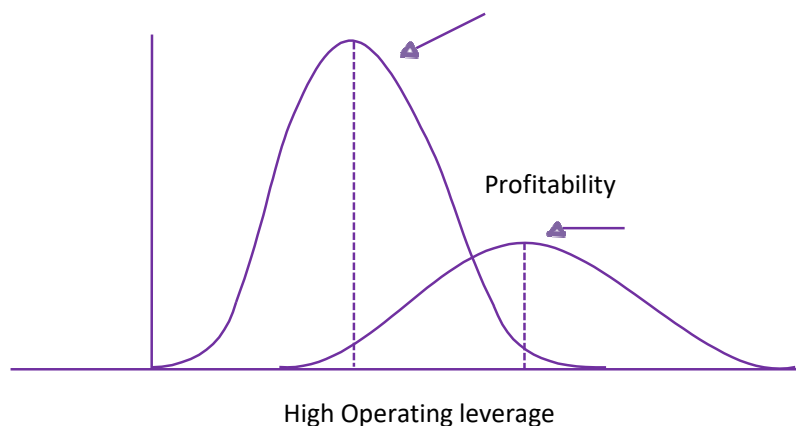

c) Combined Leverage

### 3.3 Chart Showing Operating Leverage, Financial Leverage and Combined leverage

| Profitability Statement              |       | Operating<br>Leverage | Financial<br>Leverage | Combined<br>Leverage |
|--------------------------------------|-------|-----------------------|-----------------------|----------------------|
| Sales                                | xxx   |                       |                       |                      |
| Less: Variable Cost                  | (xxx) |                       |                       |                      |
| Contribution                         | xxx   |                       |                       |                      |
| Less: Fixed Cost                     | (xxx) |                       |                       |                      |
| Operating Profit/ EBIT               | xxx   |                       |                       |                      |
| Less: Interest                       | (xxx) |                       |                       |                      |
| Earnings Before Tax (EBT)            | xxx   |                       |                       |                      |
| Less: Tax                            | (xxx) |                       |                       |                      |
| Profit After Tax (PAT)               | xxx   |                       |                       |                      |
| Less: Pref. Dividend (if any)        | (xxx) |                       |                       |                      |
| Net Earnings available to equity     | xxx   |                       |                       |                      |
| shareholders/ PAT                    | xxx   |                       |                       |                      |
| No. Equity shares (N)                | xxx   |                       |                       |                      |
| Earnings per Share (EPS) = (PAT ÷ N) | xxx   |                       |                       |                      |

### 3.4 Operating Leverage

- Operating leverage (OL) may be defined as the employment of an asset with a fixed cost in the hope that sufficient revenue will be generated to cover all the fixed and variable costs.
- The use of assets for which a company pays a fixed cost is called operating leverage. With fixed costs the percentage change in profits accompanying a change in volume is greater than the percentage change in volume. The higher the turnover of operating assets, the greater will be the revenue in relation to the fixed charge on those assets.

**EBITL EBITH :**

Operating leverage is a function of three factors :

- i) Amount of fixed cost

- ii) Variable contribution margin and
- iii) Volume of sales.

$$\text{Operating Leverage (OL)} = \frac{\text{Contribution (C)}}{\text{Earnings before interest and tax (EBIT)}}$$

Where, Contribution (C) = Sales – Variable cost

EBIT = Sales – Variable cost – Fixed cost

### 3.5 Break-Even Analysis and Leverage

- Break-even analysis is a generally used method to study the Cost Volume Profit analysis. This technique can be explained in two ways :
  - a) It is concerned with computing the break-even point. At this point of production level and sales there will be no profit and loss i.e. total cost is equal to total sales revenue.
  - b) This technique is used to determine the possible profit/loss at any given level of production or sales.
- There is a relationship between leverage and Break-even point. Both are used for profit planning. In brief the relationship between leverage, break-even point and fixed cost as under.

| Leverage |                       | Break-even point |                         |
|----------|-----------------------|------------------|-------------------------|
| 1.       | Firm with leverage    | 1.               | Higher Break-even point |
| 2.       | Firm with no leverage | 2.               | Lower Break-even point  |

| Fixed cost |                  | Operating leverage |                                    |
|------------|------------------|--------------------|------------------------------------|
| 1.         | High fixed cost  | 1.                 | High degree of operating leverage  |
| 2.         | Lower fixed cost | 2.                 | Lower degree of operating leverage |

### 3.6 Degree of Operating Leverage (DOL)

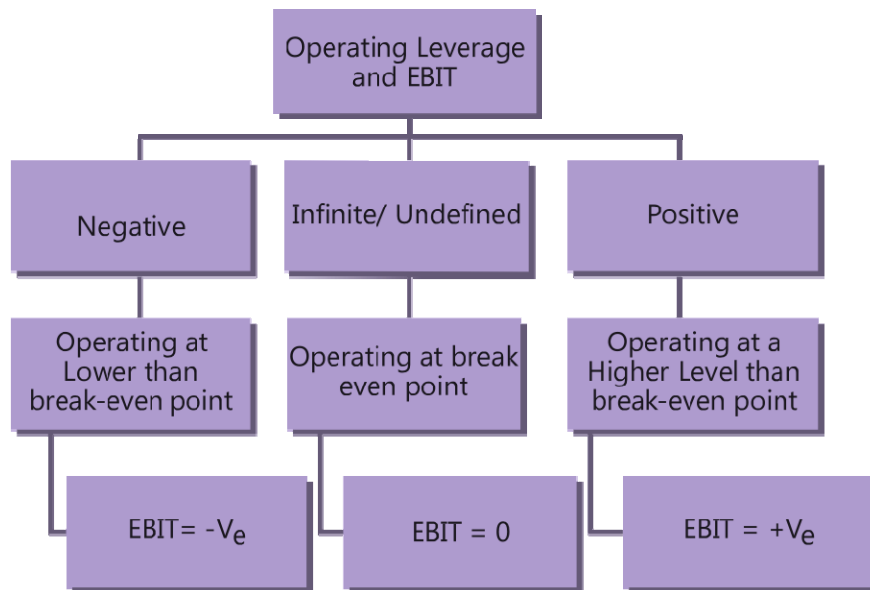

- The operating leverage may also be defined as “the firm’s ability to use fixed operating cost to magnify the effects of changes in sales on its earnings before interest and taxes.”

$$\text{Degree of Operating Leverage (DOL)} = \frac{\text{Percentage change in EBIT}}{\text{Percentage change in Sales}}$$

OR

$$= \frac{\frac{\Delta \text{ EBIT}}{\text{EBIT}}}{\frac{\Delta \text{ Sales}}{\text{Sales}}}$$

- Δ EBIT means changes in EBIT Δ Sales means changes in Sales
- When DOL is more than one (1), operating leverage exists. More is the DOL higher is operating leverage.
- A positive DOL/OL means that the firm is operating at higher level than the break-even level and both sales and EBIT moves in the same direction. In case of negative DOL/OL firm operates at lower than the break-even and EBIT is negative.

Positive and Negative Operating Leverage

| Sr. No. | Situation                    | Result                      |
|---------|------------------------------|-----------------------------|
| 1       | No Fixed Cost                | No operating leverage       |
| 2.      | Higher Fixed cost            | Higher Break-even point     |
| 3.      | Higher than Break-even level | Positive operating leverage |
| 4.      | Lower than Break-even level  | Negative operating leverage |

### 3.7 Financial Leverage

- Financial leverage (FL) maybe defined as ‘the use of funds with a fixed cost in order to increase earnings per share. In other words, it is the use of company funds on which it pays a limited return.
- Financial leverage involves the use of funds obtained at a fixed cost in the hope of increasing the return to common stockholders.

Where,  $EBIT = \text{Sales} - \text{Variable cost} - \text{Fixed cost}$

$EBT = EBIT - \text{Interest}$

### 3.8 Degree of Financial Leverage (DFL)

- Degree of financial leverage is the ratio of the percentage increase in earnings per share (EPS) to the percentage increase in earnings before interest and taxes (EBIT).
- Financial Leverage (FL) is also defined as ‘the ability of a firm to use fixed financial charges to magnify the effect of changes in EBIT on EPS’.

$$\text{Degree of Financial Leverage (DFL)} = \frac{\text{Percentage change in Earning per share (EPS)}}{\text{Percentage change in Earnings before Interest \& Tax (EBIT)}}$$

OR

$$= \frac{\frac{\Delta \text{EPS}}{\text{EPS}}}{\frac{\Delta \text{EBIT}}{\text{EBIT}}}$$

- $\Delta \text{EPS}$  means change in EPS and  $\Delta \text{EBIT}$  means change in EBIT.

- When DFL is more than one (1), financial leverage exists. More is DFL higher is financial leverage.
- A positive DFL/ FL means firm is operating at a level higher than break-even point and EBIT and EPS moves in the same direction. Negative DFL/ FL indicates the firm is operating at lower than break-even point and EPS is negative.
- Analysis and Interpretation of Financial leverage

| Sr. No. | Situation   | Result                      |
|---------|---|-----------------------------|
| 1       | No Fixed Financial Cost                             | No Financial leverage       |
| 2.      | Higher Fixed Financial cost                         | Higher Financial Leverage   |
| 1.      | When EBIT is higher than Financial Break-even point | Positive Financial leverage |
| 4.      | When EBIT is less than Finance Break-even point     | Negative Financial leverage |

### 3.9 Financial Leverage as 'Trading on Equity'

- Financial leverage indicates the use of funds with fixed cost like long term debts and preference share capital along with equity share capital which is known as trading on equity.
- The basic aim of financial leverage is to increase the earnings available to equity shareholders using fixed cost fund.
- A firm is known to have a positive leverage when its earnings are more than the cost of debt.
- If earnings is equal to or less than cost of debt, it will be an unfavourable leverage.
- When the quantity of fixed cost fund is relatively high in comparison to equity capital it is said that the firm is "trading on equity".

### 3.10 Financial Leverage as a 'Double edged Sword'

- On one hand when cost of 'fixed cost fund' is less than the return on investment financial leverage will help to increase return on equity and EPS.
- The firm will also benefit from the saving of tax on interest on debts etc. However, when cost of debt will be more than the return it will affect return of equity and EPS unfavourably and as a result firm can be under financial distress. This is why financial leverage is known as "double edged sword".
- Effect on EPS and ROE :  
When,  $ROI > \text{Interest}$  – Favorable Advantage  
When,  $ROI < \text{Interest}$  – Unfavorable – Disadvantage  
When,  $ROI = \text{Interest}$  – Neutral – Neither advantage nor disadvantage.

### 3.11 Combined Leverage

- Combined leverage maybe defined as the potential use of fixed costs, both operating and financial, which magnifies the effect of sales volume change on the earning per share of the firm.

### 3.12 Degree of Combined Leverage (DCL)

- Degree of combined leverage (DCL) is the ratio of percentage change in earning per share to the percentage change in sales. It indicates the effect the sales changes will have on EPS.
- Like operating leverage and financial leverage, combined leverage can also be positive and negative combined leverage.
- Analysis and Interpretation of Combined leverage.

| SR. No. | Situation                                    | Result                     |
|---------|--|----------------------------|
| 1.      | No Fixed Cost and Fixed Financial Fixed Cost | No Combined leverage       |
| 2.      | Higher Fixed cost                            | Higher Combined Leverage   |
| 3.      | Sales level higher than break-even level     | Positive combined leverage |
| 4.      | Sales leverage lower than break-even level   | Negative Combined leverage |

## 4 IDEAL COMBINATION OF LEVERAGE

- Combined leverage is analysed by reference to the combination of DOL and DFL, as under-

| DOL  | DFL  | Effect                  | Reasons and Significance   |
|------|------|-------------------------|--|
| High | High | Risky                   | High DOL - High operating risk - High fixed costs & BEP.<br>High DFL - Small fall in EBIT will lead to greater fall in EBT.  |
| High | Low  | Careful                 | High DOL's impact is sought to be set off with low financial risk. Hence equity shareholders interest is safeguarded.  |
| Low  | Low  | Cautious & Conservative | Low DOL - Low operating risk - Low fixed costs & BEP. But Equity shareholder's gains are not maximized, since DFL is low.  |
| Low  | High | Preferable              | Low DOL - Low operating risk - Low fixed costs & BEP. Due to high DFL (favorable gearing), small rise in EBIT leads to greater rise in EBT and EPS. Hence Equity shareholders gains are maximized. |

## 5 RELATIONSHIP BETWEEN SALES & CAPITAL EMPLOYED

- Increase in sales leads to increase in EBIT, EBT and ROI. Hence, a firm may be tempted to try to raise its capital Turnover Ratio (i.e.  $\text{Sales} \div \text{Capital employed}$ ) without restraint, merely by increasing the numerator (i.e. Sales).
- However, as sales increase, there is a need for increase in the amount of capital base (i.e. funds employed), both fixed assets and net working capital. Extra production can be achieved only by installing more machinery (i.e. Fixed Assets). Increase in activity levels also entail more purchase of Raw materials (hence more stockholding and creditors), more money blocked in debtors, etc.
- Hence, as sales increase, both current assets and current liabilities also increase, but not necessarily in proportion to the current ratio. Hence current ratio may register a fall and affect the liquidity position of the firm adversely.
- To avoid this adverse effect, an increase in sales and activity levels, must be supported by an adequate capital base and increase in the amount of funds employed, more particularly in working capital.

# LEVERAGE

**Financial (DFL)**  
occurs due to  
fixed financial  
cost  
eg - Interest

**Operational (DOL)**  
occurs due to  
fixed operational  
cost. eg - rent,  
depreciation, salary

**Combined (DCL)**

occurs due to  
both, fixed  
financial cost  
and operational  
cost

Example -

(1) With fixed cost

|                                       | Before  | +ve     | -ve     |
|---------------------------------------|---------|---------|---------|
| Sale                                  | 10,000  | 20,000  | 5,000   |
| (-) Variable Cost                     | (3,000) | (6,000) | (1,500) |
| contribution                          | 7,000   | 14,000  | 3,500   |
| (-) fixed cost<br>↳ eg - rent, salary | (4,000) | (4,000) | (4,000) |
| EBIT                                  | 3,000   | 10,000  | (500)   |

more than 3 times

(2) Without fixed cost

|                   |         |         |
|-------------------|---------|---------|
| Sale              | 10,000  | 20,000  |
| (-) Variable Cost | (3,000) | (6,000) |
| contribution      | 7,000   | 14,000  |
| (-) fixed cost    | (0)     | (0)     |
| EBIT              | 7,000   | 14,000  |

2 times

$$DOL = \frac{\text{Contri}}{EBIT}$$

$$\therefore, (1) DOL = \frac{7,000}{3,000} = 2.33 \text{ times}$$

$$3,000 + 2.33 (3,000) = 10,000$$

↪ increased by 2.33 times

$$(2) DOL = \frac{7,000}{7,000} = 1 \text{ time}$$

When fixed cost is zero, DOL would always be '1'

(3) high fixed cost

|                   |         |         |
|-------------------|---------|---------|
| Sale              | 10,000  | 20,000  |
| (-) Variable Cost | (3,000) | (6,000) |
| contribution      | 7,000   | 14,000  |
| (-) fixed cost    | (6,000) | (6,000) |
| EBIT              | 1,000   | 8,000   |

$$DOL = \frac{7,000}{1,000} = 7 \text{ times}$$

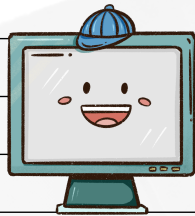

conclusion

| fixed Cost | DOL        |
|------------|------------|
| 1. 4,000   | 2.33 times |
| 2. 6,000   | 7 times    |

If fixed cost increases DOL increases. Hence, leverage more, risk is more.

## Summary

Companies like PVR, Air India having high fixed cost like rent, interest, salary will have more leverage. Although there is no sale during covid, still all such fixed cost remain constant. Hence, company is taking high risk. As an investor we should prefer to invest in a company having low fixed cost as well as low leverage.

## Case Study

Air India - 1,000 aircrafts

|                    |                            |
|--------------------|----------------------------|
| Debt. - 10,000 Cr. | Adverse impact of leverage |
| ROI - 18%          | ROI - 6%                   |
| Int. - 10%         | Int. - 10%                 |
| Profit - 8%        | loss - (4%)                |

## Interpretation of leverage.

|         |        |               |        |
|---------|--------|---------------|--------|
| DFL     | ज्याका | DOL           | ज्याका |
| Debt.   | ज्याका | fixed cost    | ज्याका |
| Int.    | ज्याका | Rent / Salary | ज्याका |
| Risk    | ज्याका | Risk          | ज्याका |
| Benefit | ज्याका | Profit        | ज्याका |
| Profit  | ज्याका |               |        |

Let's understand  $\Delta OL$ ,  $\Delta FL$ ,  $\Delta CL$  with the help of following example

|                            | FY 23   | FY 24   | Change |
|----------------------------|---------|---------|--------|
| Sale                       | 20,000  | 24,000  | 20%    |
| (-) Variable Cost<br>(30%) | (6,000) | (7,200) | 20%    |
| contribution               | 14,000  | 16,800  | 20%    |
| (-) fixed cost             | (4,000) | (4,000) | 0%     |
| EBIT                       | 10,000  | 12,800  | 28%    |
| (-) Interest               | (5,000) | (5,000) | 0%     |
| EBT                        | 5,000   | 7,800   | 56%    |

Answer :-

$$\begin{aligned}\Delta OL (F_1) &= \frac{\text{Contribution}}{\text{EBIT}} \\ &= \frac{14,000}{10,000} \\ &= 1.4\end{aligned}$$

$$\begin{aligned}\Delta OL (F_2) &= \frac{\% \text{ change in EBIT}}{\% \text{ change in Sales}} \\ &= \frac{28\%}{20\%} \\ &= 1.4\end{aligned}$$

$$\begin{aligned}\Delta FL (F_1) &= \frac{\text{EBIT}}{\text{EBT}} \\ &= \frac{10,000}{5,000} \\ &= 2\end{aligned}$$

$$\begin{aligned}\Delta FL (F_2) &= \frac{\% \text{ change in EBT}}{\% \text{ change in EBIT}} \\ &= \frac{56\%}{28\%} \\ &= 2\end{aligned}$$

$$\begin{aligned}\Delta CL &= \Delta OL \times \Delta FL \\ &= 1.4 \times 2 \\ &= 2.8\end{aligned}$$

$$\Delta CL (F_1) = \frac{\text{Contri}}{\text{EBIT}} \times \frac{\text{EBIT}}{\text{EBT}}$$

$$\begin{aligned}\Delta CL (F_2) &= \frac{\% \text{ change in EBIT}}{\% \text{ change in Sales}} \times \frac{\% \text{ change in EBT}}{\% \text{ change in EBIT}} \\ &= \frac{28\%}{20\%} \times \frac{56\%}{28\%} \\ &= 2.8\end{aligned}$$

$$DCL = \frac{\text{Contri}}{EBT}$$

$$(F_1)$$

$$= \frac{14,000}{5,000}$$

$$= 2.8$$

$$DCL = \frac{\% \text{ change in EBT}}{\% \text{ change in Sales}}$$

$$(F_2)$$

$$= \frac{56\%}{20\%}$$

$$= 2.8$$

## QUESTION

|        |             |         |                |
|--------|-------------|---------|----------------|
| Date : | N.B. Pg. No | Stars : | Illustration 1 |
|--------|-------------|---------|----------------|

**Q.1** A Company produces and sells 10,000 shirts. The selling price per shirt is ₹ 500. Variable cost is ₹ 200 per shirt and fixed operating cost is ₹ 25,00,000.

- (a) CALCULATE operating leverage.  
(b) If sales are up by 10%, then COMPUTE the impact on EBIT ?

Point To Be Noted: \_\_\_\_\_

$$DOL = \frac{\% \text{ change in EBIT}}{\% \text{ change in Sales}}$$

| Particulars       | Amnt.       |
|-------------------|-------------|
| Sale              | 50,00,000   |
| (-) Variable Cost | (20,00,000) |
| contribution      | 30,00,000   |
| (-) fixed cost    | (25,00,000) |
| EBIT              | 5,00,000    |

$$a) DOL = \frac{\text{Contribution}}{EBIT}$$

$$= \frac{30,00,000}{5,00,000}$$

$$= 6$$

$$b) DOL = \frac{\% \text{ change in EBIT}}{\% \text{ change in Sale}}$$

$$6 = \frac{\% \text{ change in EBIT}}{10\%}$$

$$\% \text{ change in EBIT} = 60\%$$

$$\therefore, \text{new EBIT} = 5,00,000 + 60\% \cdot (5,00,000) = 8,00,000$$

|        |             |         |                |

Q.2 CALCULATE the operating leverage for each of the four firms A, B, C and D from the following price and cost data :

|                      | Firms  |        |          |     |
|----------------------|--------|--------|----------|-----|
|                      | A      | B      | C        | D   |
| Sale Price/unit      | 20     | 32     | 50       | 70  |
| Variable cost/unit   | 6      | 16     | 20       | 50  |
| Fixed Operating cost | 60,000 | 40,000 | 1,00,000 | nil |

What calculations can you draw with respect to levels of fixed cost and the degree of operating leverage result? EXPLAIN. Assume number of units sold is 5,000.

Point To Be Noted: \_\_\_\_\_

$$DOL = \frac{\text{Contri}}{\text{EBIT}}$$

| Particulars                               | A                       | B                       | C                         | D                           |
|---|-------------------------|-------------------------|---------------------------|-----------------------------|
| Sales                                     | 1,00,000                | 1,60,000                | 2,50,000                  | 3,50,000                    |
| (-) variable cost                         | (30,000)                | (80,000)                | (1,00,000)                | (2,50,000)                  |
| contribution                              | 70,000                  | 80,000                  | 1,50,000                  | 1,00,000                    |
| (-) fixed cost                            | (60,000)                | (40,000)                | (1,00,000)                | (nil)                       |
| EBIT                                      | 10,000                  | 40,000                  | 50,000                    | 1,00,000                    |
| $DOL = \frac{\text{Contri}}{\text{EBIT}}$ | $\frac{70,000}{10,000}$ | $\frac{80,000}{40,000}$ | $\frac{1,50,000}{50,000}$ | $\frac{1,00,000}{1,00,000}$ |
|   | 7                       | 2                       | 3                         | 1                           |

Q.3 A firm's details are as under:

|                       |             |
|-----------------------|-------------|
| Sales (@100 per unit) | 24,00,000   |
| Variable Cost         | 50%         |
| Fixed Cost            | ₹ 10,00,000 |

It has borrowed ₹ 10,00,000 @ 10% p.a. and its equity share capital is ₹ 10,00,000 (₹ 100 each).

Consider tax @ 50 %. CALCULATE:

- Operating Leverage
- Financial Leverage
- Combined Leverage
- Return on Investment
- If the sales increases by ₹ 6,00,000; what will the new EBIT?

Point To Be Noted: \_\_\_\_\_

$$ROI = \frac{PAT}{\text{Shareholder's fund}}$$

| Particulars                       | Amount      |
|-----------------------------------|-------------|
| Sale                              | 24,00,000   |
| (-) Variable Cost                 | (12,00,000) |
| contribution                      | 12,00,000   |
| (-) fixed cost                    | (10,00,000) |
| EBIT                              | 2,00,000    |
| (-) Interest<br>(10,00,000 × 10%) | (1,00,000)  |
| EBT                               | 1,00,000    |
| (-) Tax @ 50%                     | (50,000)    |
| PAT                               | 50,000      |

$$a) DOL = \frac{\text{Contri}}{EBIT} = \frac{12,00,000}{2,00,000} = 6$$

$$b) DFL = \frac{EBIT}{EBT} = \frac{2,00,000}{1,00,000} = 2$$

$$\begin{aligned} c) \quad DCL &= DOL \times DFL \\ &= 6 \times 2 \\ &= 12 \end{aligned}$$

$$d) \quad RDI = \frac{PAT}{\text{Shareholder's fund}}$$

$$\begin{aligned} &= \frac{50,000}{10,00,000} \times 100 \\ &= 5\% \end{aligned}$$

$$e) \quad DOL = \frac{\% \text{ change in EBIT}}{\% \text{ change in Sale}}$$

$$6 = \frac{\% \text{ change in EBIT}}{25\%}$$

$$\therefore, \% \text{ change in EBIT} = 150\%$$

$$\text{new EBIT} = \text{old EBIT} + 150\% (\text{old EBIT})$$

$$\text{new EBIT} = 2,00,000 + 150\% (2,00,000)$$

$$\text{new EBIT} = 5,00,000$$

Q.4 The following information is related to Yizi Company Ltd. for the year ended 31st March, 2021:

|                                     |          |
|-------------------------------------|----------|
| Equity share capital (of ₹ 10 each) | 50 lakhs |
| 12% Bonds of ₹ 1,000 each           | 37 lakhs |
| Sales                               | 84 lakh  |

✖ ✖ ✖ ✖ ✖

|                       |        |
|-----------------------|--------|
| Financial leverage    | 1.49   |
| Profit-volume Ratio   | 27.55% |
| Income Tax Applicable | 40%    |

You are required to CALCULATE:

- (i) Operating Leverage;
- (ii) Combined leverage; and
- (iii) Earnings per share.

Show calculations up-to two decimal points.

Point To Be Noted:

Other interest - Balancing figure

$$\text{No. of shares} = \frac{50,00,000}{10} = 5,00,000$$

$$\text{Interest} = 37 \text{ lakhs} \times 12\% = 4,44,000$$

|                   |             |
|-------------------|-------------|
| Sale              | 84,00,000   |
| (-) variable cost | (60,85,800) |

|                |           |
|----------------|-----------|
| Contribution   | 23,14,200 |
| (-) fixed cost | 6,96,000  |

|              |            |
|--------------|------------|
| EBIT         | 16,18,200  |
| (-) Interest | (4,44,000) |

$$\frac{\text{EBIT}}{\text{EBT}} = 1.49$$

$$\frac{16,18,200}{\text{EBT}} = 1.49$$

|                  |           |
|------------------|-----------|
| (-) Other Int. * | (88,160)* |
|------------------|-----------|

$$\therefore, \text{EBT} = 10,86,040$$

Balancing figure

EBT

$$10,86,040 \text{ } \oplus$$

$$11,74,200$$

|               |          |
|---------------|----------|
| (-) Tax @ 40% | 4,34,416 |
|---------------|----------|

|                   |          |
|-------------------|----------|
| PAT               | 6,51,624 |
| (÷) no. of shares | 5,00,000 |

|     |      |
|-----|------|
| EPS | 1.30 |
|-----|------|

$$i) \text{ DOL} = \frac{\text{Contri}}{\text{EBIT}} = \frac{23,14,200}{16,18,200} = 1.43$$

$$ii) \text{ DFL} = \frac{\text{EBIT}}{\text{EBT}} = \frac{16,18,200}{10,86,040} = 1.49$$

$$iii) \text{ DCL} = 1.49 \times 1.43 = 2.13$$

Q.5 Following are the selected financial information of A Ltd. and B Ltd. for the year ended March 31st, 2021:

|                     | A Ltd  | B Ltd    |
|---------------------|--------|----------|
| Variable Cost Ratio | 60%    | 50%      |
| Interest            | 20,000 | 1,00,000 |
| Operating Leverage  | 5      | 2        |
| Financial Leverage  | 3      | 2        |
| Tax Rate            | 30%    | 30%      |

You are required to FIND out:

- (i) EBIT (ii) Sales  
(iii) Fixed Cost (iv) Identify the company which is better placed with reasons based on leverages.

Point To Be Noted:

$$DFL = \frac{EBIT}{EBIT - \text{Interest}}$$

Working note :- find out EBIT

**A**

$$DFL = \frac{EBIT}{EBT}$$

$$3 = \frac{EBIT}{EBIT - \text{Interest}}$$

$$3 = \frac{EBIT}{EBIT - 20,000}$$

$$\therefore EBIT = 30,000$$

**B**

$$DFL = \frac{EBIT}{EBT}$$

$$2 = \frac{EBIT}{EBIT - \text{Interest}}$$

$$2 = \frac{EBIT}{EBIT - 1,00,000}$$

$$EBIT = 2,00,000$$

Working note - find out contribution and sales

**A**

$$DOL = \frac{\text{Contri}}{EBIT}$$

$$5 = \frac{\text{Contri}}{30,000}$$

∴

$$\text{Contribution} = 30,000$$

**B**

$$DOL = \frac{\text{Contri}}{EBIT}$$

$$2 = \frac{\text{Contri}}{2,00,000}$$

$$\text{Contribution} = 4,00,000$$

Sales <sup>100%</sup> 375,000 ✓  
 (-) v. cost <sup>60%</sup> (2,25,000)  
 contri <sup>40%</sup> 1,50,000

(-) fixed cost (1,20,000)

EBIT 30,000

Sales <sup>100%</sup> 8,00,000 ✓  
 (-) v. cost <sup>50%</sup> (4,00,000)  
 contri <sup>50%</sup> 4,00,000

(-) fixed cost (2,00,000)

EBIT 2,00,000

Considering DOL and DFC, B Ltd is better placed.

Practical Q1

Q.6 From the following information extracted from the books of accounts of Imax Ltd., CALCULATE percentage change in earnings per share, if sales increase by 10% and Fixed Operating cost is ₹ 1,57,500.

| Particulars                             | Amount in (₹) |
|---|---------------|
| EBIT (Earnings before Interest and Tax) | 31,50,000     |
| Earnings before Tax (EBT)               | 14,00,000     |

Point To Be Noted :

read formulas

### Conceptual Understanding

|                   |        |        | change |
|-------------------|--------|--------|--------|
| Sale              | 10,000 | 14,000 | 40%    |
| (-) Variable cost | 2,000  | 2,800  | 40%    |
|                   | @20%   |        |        |
| contri            | 8,000  | 11,200 | 40%    |
| (-) fixed cost    | 3,000  | 3,000  | 0%     |
| EBIT              | 5,000  | 8,200  | 64%    |
| (-) Interest      | 2,000  | 2,000  | 0%     |
| EBT               | 3,000  | 6,200  | 106%   |
| (-) Tax @50%      | 1,500  | 3,100  |        |
| PAT               | 1,500  | 3,100  | 106%   |
| ÷ no. of shares   | 100    | 100    |        |
| EPS               | 15     | 31     | 106%   |

∴ % change in EBT / PAT / EPS are same

→ Hence, we can use EBT / PAT / EPS.  
In the formula DFL/DCL and answer will remain the same

$$1. \quad DOL = \frac{\% \text{ change in EBIT}}{(F_2) \% \text{ change in Sales}}$$

$$2. \quad DFL = \frac{\% \text{ change in EBT}}{(F_2) \% \text{ change in EBIT}}$$

$$3. \quad DCL = \frac{\% \text{ change in EPS}}{\% \text{ change in Sales}}$$

Answer:

| Particulars.   | Amnt.      |
|----------------|------------|
| Contribution   | 33,07,500  |
| (-) fixed Cost | 1,57,500   |
| EBIT           | 31,50,000  |
| (-) Interest   | 17,50,000* |
| EBT            | 14,00,000  |

$$DOL = \frac{\text{Contri}}{\text{EBIT}} = \frac{33,07,500}{31,50,000} = 1.05$$

$$DFL = \frac{\text{EBIT}}{\text{EBT}} = \frac{31,50,000}{14,00,000} = 2.25$$

$$DCL = 2.25 \times 1.05$$

$$= 2.3625$$

$$DCL_{(F2)} = \frac{\% \text{ change in EPS}}{\% \text{ change in Sales}}$$

$$2.3625 = \frac{\% \text{ change in EPS}}{10\%}$$

$$\% \text{ change in EPS} = 23.625\%$$

|        |             |         |              |

| Date : | N.B. Pg. No | Stars : | Practical Q2 |
|--------|-------------|---------|--------------|

**Q.7** Consider the following information for Mega Ltd.:

|                       |             |
|-----------------------|-------------|
| Production level      | 2,500 units |
| Contribution per unit | ₹ 150       |
| Operating leverage    | 6           |
| Combined leverage     | 24          |
| Tax rate              | 30%         |

Required: COMPUTE its earnings after tax.

*Point To Be Noted:* \_\_\_\_\_

*Basic calculations*

| Particulars    | Amount (₹) |
|----------------|------------|
| Contribution   | 3,75,000   |
| (-) fixed cost | (3,12,500) |
| EBIT           | 62,500     |
| (-) Interest   | (46,875)   |
| EBT            | 15,625     |
| (-) Tax @ 30%  | (4,687.5)  |
| EAT            | 10,938     |

Working note 1 -

$$DOL = \frac{\text{Contri}}{EBIT}$$

$$6 = \frac{3,75,000}{EBIT}$$

$$\therefore, EBIT = 62,500$$

Working note 2 -

$$\Delta FL = \frac{EBIT}{EBT}$$

$$4 = \frac{62,500}{EBT}$$

$$\therefore, EBT = 15,625$$

|        |             |         |              |

| Date : | N.B. Pg. No | Stars : | Practical Q4 |
|--------|-------------|---------|--------------|

**Q.8** The capital structure of PS Ltd. for the year ended 31st March 2021 consisted as follows:

| Particulars                                  | Amount in (₹) |
|--|---------------|
| Equity share capital (face value ₹ 100 each) | 10,00,000     |
| 10% debentures (₹ 100 each)                  | 10,00,000     |

During the year 2020-21, sales decreased to 1,00,000 units as compared to 1,20,000 units in the previous year. However, the selling price stood at ₹ 12 per unit and variable cost at ₹ 8 per unit for both the years. The fixed expenses were at ₹ 2,00,000 p.a. and the income tax rate is 30%.

You are required to CALCULATE the following:

- The degree of financial leverage at 1,20,000 units and 1,00,000 units.
- The degree of operating leverage at 1,20,000 units and 1,00,000 units.
- The percentage change in EPS.

**Point To Be Noted:** \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

| Particulars  | 19-20     | 20-21     |
|--|-----------|-----------|
| Sold Qty   | 1,20,000  | 1,00,000  |
| Price/Unit   | 12        | 12        |
| ∴, Sale Value  | 14,40,000 | 12,00,000 |
| (-) Variable cost  | 8         | 8         |
| p.u  |           |           |
| ∴ V. cost  | 9,60,000  | 8,00,000  |
| contri   | 4,80,000  | 4,00,000  |
| (-) fixed cost   | 2,00,000  | 2,00,000  |
| EBIT   | 2,80,000  | 2,00,000  |
| (-) Interest   | 1,00,000  | 1,00,000  |
| EBT  | 1,80,000  | 1,00,000  |
| (-) Tax @ 30 %   | 54,000    | 30,000    |
| PAT  | 1,26,000  | 70,000    |
| ÷ no. of shares  | 10,000    | 10,000    |
| ∴ EPS  | 12.6      | 7         |
| DOL $\frac{\text{contri}}{\text{EBIT}}$  | 1.71      | 2         |
| DFL $\frac{\text{EBIT}}{\text{EBT}}$   | 1.55      | 2         |
| $\% \text{ Change in EPS}$ $= \frac{12.6 - 7}{12.6} \times 100$ $= \frac{5.6}{12.6} \times 100 = 44.44 \% \text{ decreased}$ |           |           |

Practical Q5

- Q.9 The Sale revenue of TM excellence Ltd. @ ₹ 20 Per unit of output is ₹ 20 lakhs and Contribution is ₹ 10 lakhs. At the present level of output, the DOL of the company is 2.5. The company does not have any Preference Shares. The number of Equity Shares are 1 lakh. Applicable corporate Income Tax rate is 50% and the rate of interest on Debt Capital is 16% p.a. CALCULATE the EPS (at sales revenue of ₹ 20 lakhs) and amount of Debt Capital of the company if a 25% decline in Sales will wipe out EPS.

| Particulars       | Amount (₹)    |
|-------------------|---------------|
| Sales             | 20,00,000     |
| (-) variable cost | (10,00,000) + |
| Contribution      | 10,00,000     |
| (-) fixed cost    | (6,00,000) +  |
| EBIT              | 4,00,000      |
| (-) Interest      | (1,50,000)    |
| EBT               | 2,50,000      |
| (-) Tax           | (1,25,000)    |
| PAT               | 1,25,000      |
| (÷) no. of shares | 1,00,000      |
| EPS               | 1.25          |

Working notes:

$$1. \quad DOL = \frac{\text{Contri}}{EBIT}$$

$$2.5 = \frac{10,00,000}{EBIT}$$

$$EBIT = 4,00,000$$

$$2. \quad DCL = \frac{\% \text{ Change in EPS}}{\% \text{ change in Sales}}$$

$$= \frac{100\%}{25\%}$$

$$= 4$$

$$4 = DOL \times DFL$$

$$4 = 2.5 \times DFL$$

$$DFL = 1.6$$

$$3. \quad DFL = \frac{EBIT}{EBT}$$

$$1.6 = \frac{4,00,000}{EBT}$$

$$EBT = 2,50,000$$

$$4. \quad \text{Debt Capital} = \frac{\text{Int.}}{16\%} = \frac{1,50,000}{16\%}$$

$$= 937500$$

|        |             |         |               |

| Date : | N.B. Pg. No | Stars : | Practical Q10 |
|--------|-------------|---------|---------------|

**Q.10** The following details of a company for the year ended 31st March, 2021 are given below:

|                                  |               |
|----------------------------------|---------------|
| Operating Leverage               | 2:1           |
| Combined Leverage                | 2.5:1         |
| Fixed Cost (excl Interest)       | ₹ 3.4 lakhs   |
| Sales ₹ 50 lakhs                 |               |
| 8% Debentures of ₹100 each       | ₹ 30.25 lakhs |
| Equity Share capital of ₹10 each | ₹ 34 lakhs    |
| Income Tax Rate                  | 30%           |

CALCULATE:

- Financial Leverage
- P/V ratio and Earning per Share (EPS)
- If the company belongs to an industry, whose assets turnover is 1.5, does it have a high or low assets turnover?
- At what level of sales, the Earning before Tax (EBT) of the company will be equal to zero?

Point To Be Noted: \_\_\_\_\_

$$P/V \text{ ratio} = \frac{\text{Contri}}{\text{Sales}} \quad \text{Total assets} = \Delta + E$$

Working note 1.  $\Delta CL = \Delta OL \times DFL$   
 $2 = 2.5 \times DFL$   
 $DFL = 1.25$

2.  $DFL = \frac{EBIT}{EBT}$

$1.25 = \frac{EBIT}{EBIT - \text{Interest}}$

$1.25 = \frac{EBIT}{EBIT - 2,42,000}$

$EBIT = 12,10,000$

### 3. Income Statement.

| Particulars       | Amt. (₹)    | Amt. (₹)                   |
|-------------------|-------------|----------------------------|
| Sales             | 50,00,000   | 18,77,419 <sup>100%</sup>  |
| (-) Variable cost | (34,50,000) | (12,95,419) <sup>69%</sup> |
| Contribution      | 15,50,000   | 5,82,000 <sup>31%</sup>    |
| (-) Fixed Cost    | (3,40,000)  | (3,40,000)                 |
| EBIT              | 12,10,000   | 2,42,000                   |
| (-) Interest      | (2,42,000)  | (2,42,000)                 |
| EBT               | 9,68,000    | 0                          |
| (-) Tax @ 30 %    | (2,90,400)  |                            |
| PAT               | 6,77,600    |                            |
| (÷) no. of shares | 3,40,000    |                            |
| EPS               | 1.99        |                            |

$$4. \quad P/V \text{ ratio} = \frac{\text{Contri}}{\text{Sales}} = \frac{15,50,000}{50,00,000} = 31\%$$

5. Asset T/O Ratio ÷

$$\text{Total Assets} = D + E$$

$$= 30,25,000 + 34,00,000$$

$$= 64,25,000$$

$$\text{Industry T/O ratio} = 1.5$$

∴, Industry would have made the sale of

$$= 64,25,000 \times 1.5$$

$$= 96,37,500$$

$$\text{Our sale} = 50,00,000$$

∴, Our TO ratio is lower than Industry.

⇒ Alternatively, students can solve by considering DOL first. In that case, answer may vary. Kindly check the ICAI module answer.

Q.15 A Company had the following Balance Sheet as on March 31, 2017.

| Liabilities and Equity           | Amount (₹) | Assets         | Amount (₹) |
|----------------------------------|------------|----------------|------------|
| Equity Share Capital of ₹10 each | 10,00,000  | Fixed Assets   | 30,00,000  |
| Reserves and Surplus             | 2,00,000   | Current Assets | 18,00,000  |
| 15% Debentures                   | 28,00,000  |                |            |
| Current Liabilities              | 8,00,000   |                |            |
|                                  | 48,00,000  |                | 48,00,000  |

The additional information given is a sunder:

Fixed cost per annum (excluding Interest) - ₹ 28,00,000 Variable Operating Cost Ratio –60%

Total Assets Turnover Ratio – 2.5 Income Tax Rate –30%

Calculate the following and comment :

- Earnings per share
- Combined Leverage.

Point To Be Noted: \_\_\_\_\_

$$\text{Sales} = \text{Assets} \times \text{Asset turnover ratio}$$

Working note 1.  $\text{Sales} = \text{Assets} \times 2.5$   
 $= 48,00,000 \times 2.5$   
 $= 1,20,00,000$

## 2. Income Statement

| Particulars             | Amt. (₹)    |
|-------------------------|-------------|
| Sales                   | 1,20,00,000 |

|--------|-------------|---------|---------------------|

Q.16 Z Limited is considering the installation of a new project costing ₹ 80,00,000. Expected annual sales revenue from the project is ₹ 90,00,000 and its variable costs are 60 percent of sales. Expected annual fixed cost other than interest is ₹ 10,00,000. Corporate tax rate is 30 percent. The company wants to arrange the funds through issuing 4,00,000 equity shares of ₹ 10 each and 12 percent debentures of ₹ 40,00,000.

You are required to:

- Calculate the operating, financial and combined leverages and Earnings per Share (EPS).
- Determine the likely level of EBIT, if EPS is ₹ 4, or ₹ 2, or 0.

Q.20 Following is the Balance Sheet of Soni Ltd. as on 31st March, 2018 :

| Liabilities                             | Amount in   |
|---|-------------|
| Share holder's Fund                     | 25,00,000   |
| Equity Share Capital(10each)            | 5,00,000    |
| Reserve and Surplus                     | 50,00,000   |
| Non-Current Liabilities (12 Debentures) | 20,00,000   |
| Current Liabilities                     | 1,00,00,000 |
| Total                                   | Amount      |
| Assets                                  | 60,00,000   |
| Non-Current Assets Current Assets       | 40,00,000   |
| Total                                   | 1,00,00,000 |

Additional Information:

- (i) Variable Cost is 60% of Sales.
- (i) Fixed Cost p.a. excluding interest ₹ 20,00,000.
- (ii) Total Asset Turnover Ratio is 5 times.
- (iii) Income Tax Rate 25% You are required to:
  - (1) Prepare Income Statement
  - (2) Calculate the following and comment:
    - (a) Operating Leverage
    - (b) Financial Leverage
    - (c) Combined Leverage

Point To Be Noted : \_\_\_\_\_

Working note :- 1. Sales = Assets x 5  
= 1,00,00,000 x 5  
= 5,00,00,000

2. Income Statement

| Particulars             | Amnt. (₹)     |
|-------------------------|---------------|
| Sales                   | 5,00,00,000   |
| (-) variable cost @ 60% | (3,00,00,000) |
| Contribution            | 2,00,00,000   |
| (-) fixed cost          | (20,00,000)   |
| EBIT                    | 1,80,00,000   |
| (-) Interest            | (6,00,000)    |
| EBT                     | 1,74,00,000   |
| (-) Tax @ 25%           | 43,50,000     |
| PAT                     | 1,30,50,000   |

$$a) DOL = \frac{Contri}{EBIT} = \frac{200,00,000}{1,80,00,000} = 1.11$$

$$b) DFL = \frac{EBIT}{EBT} = \frac{1,80,00,000}{1,74,00,000} = 1.03$$

$$c) DCL = DFL \times DOL \\ = 1.03 \times 1.11 \\ = 1.1433$$

**Q.23** A company had the following balance sheet as on 31st March, 2021 :

| Liabilities  | Rs in Crores | Assets         | Rs. in Crores |
|--|--------------|----------------|---------------|
| Equity Share Capital (75 lakhs Shares of Rs.10 each) | 7.50         | Building       | 12.50         |
| Reserves and Surplus                                 | 1.50         | Machinery      | 6.25          |
| 15% Debentures                                       | 15.00        | Current Assets |               |
| Current Liabilities                                  | 6.00         | Stock          | 3.00          |
|  |              | Debtors        | 3.25          |
|  |              | Bank Balance   | 5.00          |
|  | 30.00        |                | 30.00         |

The additional information given is as under:

Fixed cost per annum (excluding Rs.6 crores interest)

Variable operating cost ratio 60%

Total assets turnover ratio 2.5

Income-tax rate 40%

Calculate the following and comment:

- Earnings per share
- Operating Leverage
- Financial Leverage
- Combined Leverage

Working note ÷ 1. Sales = Assets × 2.5  
 $= 30,00,00,000 \times 2.5$   
 $= 75,00,00,000$

2. Income Statement

| Particulars             | Amnt. (₹)      |
|-------------------------|----------------|
| Sales                   | 75,00,00,000   |
| (-) variable cost @ 60% | (45,00,00,000) |

|                   |               |
|-------------------|---------------|
| Contribution      | 30,00,00,000  |
| (-) fixed Cost    | (6,00,00,000) |
| EBIT              | 24,00,00,000  |
| (-) Interest      | (2,25,00,000) |
| EBT               | 21,75,00,000  |
| (-) Tax @40%      | (8,70,00,000) |
| PAT               | 13,05,00,000  |
| (÷) no. of shares | 75,00,000     |
| EPS               | 17.4          |

$DOL = \frac{Contri}{EBIT} = \frac{30,00,00,000}{24,00,00,000} = 1.25$

$DFL = \frac{EBIT}{EBT} = \frac{24,00,00,000}{21,75,00,000} = 1.10$

$DCL = DFL \times DOL$   
 $= 1.10 \times 1.25$   
 $= 1.375$

Q.25 The balance sheet of Gitashree Ltd. is given Below :

| Liabilities                                  | ₹        |
|--|----------|
| Shareholders fund                            |          |
| Equity share capital of ₹ 10 each ₹ 1,80,000 |          |
| Retained earnings ₹ 60, 000                  | 2,40,000 |
| Non current liabilities 10% debt             | 2,40,000 |
| Current liabilities                          | 1,20,000 |
|  | 6,00,000 |
| Assets                                       |          |
| Fixed assets                                 | 4,50,000 |
| Current assets                               | 1,50,000 |
|  | 6,00,000 |

The company's total assets turnover ratio is 4. Its fixed operating cost is ₹ 2,00,000 and its variable operating cost ratio is 60%. The income tax rate is 30%.

Calculate :

- i) (a) Degree of Operating leverage
- (b) Degree of financial leverage
- (c) Degree of combined leverage
- ii) Find out EBIT if EPS is (a) ₹ 1 (b) ₹ 2 and (c) ₹ 0.

$$\begin{aligned}
 \text{Working note :- Sales} &= \text{Assets} \times 4 \\
 &= 6,00,000 \times 4 \\
 &= 24,00,000
 \end{aligned}$$

### Income Statement

| Particulars                        | Amnt.      | EPS = 1  | EPS = 2  | EPS = 0 |
|------------------------------------|------------|----------|----------|---------|
| Sales                              | 24,00,000  |          |          |         |

**Q.21** The capital structure of the Shiva Ltd. consists of equity share capital of ₹ 20,00,000 (Share of ₹ 100 per value) and ₹ 20,00,000 of 10% Debentures, sales increased by 20% from 2,00,000 units to 2,40,000 units, the selling price is ₹ 10 per unit; variable costs amount to ₹ 6 per unit and fixed expenses amount to ₹ 4,00,000. The income tax rate is assumed to be 50%.

You are required to calculate the following:

The percentage increase in earnings per share;

Financial leverage at 2,00,000 units and 2,40,000 units

Operating leverage at 2,00,000 units and 2,40,000 units.

Comment on the behaviour of operating and Financial leverages in relation to increase in production from 2,00,000 units to 2,40,000 units.

Q.22 The following data is available for Stone Ltd. :

|                         |          |
|-------------------------|----------|
| Sales                   | 5,00,000 |
| (-) Variable cost @ 40% | 2,00,000 |
| Contribution            | 3,00,000 |
| (-) Fixed cost          | 2,00,000 |
| EBIT                    | 1,00,000 |
| (-) Interest            | 25,000   |
| Profit before tax       | 75,000   |

Using the concept of leverage, find out

- The percentage change in taxable income if EBIT increases by 10%.
- The percentage change in EBIT if sales increase by 10%.
- The percentage change in taxable income if sales increase by 10%. Also verify the results in each of the above case.

Working notes :- 1.  $DFL = \frac{EBIT}{EBT} = \frac{1,00,000}{75,000} = 1.333$

$$DFL = \frac{\% \text{ change in EBT}}{\% \text{ change in EBIT}}$$

$$1.3333 = \frac{\% \text{ change in EBT}}{10\%}$$

$$\% \text{ change in EBT} = 13.333 \%$$

2.  $DOL = \frac{\text{Contri}}{EBIT} = \frac{3,00,000}{1,00,000} = 3$

$$DOL = \frac{\% \text{ change in EBIT}}{\% \text{ change in Sale}}$$

$$3 = \frac{\% \text{ change in EBIT}}{10\%}$$

$$\% \text{ change in EBIT} = 30\%$$

| Particulars       | Amnt (₹) | Sales (↑) 10% |
|-------------------|----------|---------------|
| Sales             | 5,00,000 | 5,50,000      |
| (-) variable cost | 2,00,000 | 2,20,000      |
| Contribution      | 3,00,000 | 3,30,000      |
| (-) fixed cost    | 2,00,000 | 2,00,000      |
| EBIT              | 1,00,000 | 1,30,000      |

↪ 30% increase

$$DCL = \frac{\text{Contri}}{EBIT} = \frac{3,00,000}{75,000} = 4$$

$$DCL = \frac{\% \text{ Change in EBIT}}{\% \text{ Change in Sales}}$$

$$4 = \frac{\% \text{ change in EBIT}}{10\%}$$

$$\therefore, \% \text{ change in EBIT} = 40\%$$

|        |             |         |                    |

**Q.26** The information related to XYZ company Ltd. for the year ended 31<sup>st</sup> March 2020 are as follows :

|                                    |             |
|------------------------------------|-------------|
| Equity share Capital of ₹ 100 each | ₹ 50 Lakhs  |
| 12% Bonds of ₹ 1000 each           | ₹ 30 Lakhs  |
| Sales                              | ₹ 84 Lakhs  |
| Fixed Cost (Excluding Interest)    | ₹ 7.5 Lakhs |
| Financial Leverage                 | 1.39        |
| Profit Volume Ration               | 25%         |
| Market Tax Rate Applicable         | ₹ 200       |
| Income Tax Rate Applicable         | 30 %        |

You are required to compute the following :

- Operating Leverages
- Combined Leverage
- Earning per share
- Earning Yield

Point To Be Noted: Earning yield =  $\frac{EPS}{MPS}$   
\* Other interest bal. figure

| Particulars                       | Ant. (₹)                |                                |
|-----------------------------------|-------------------------|--------------------------------|
| Sales                             | 84,00,000               |                                |
| (-) variable cost                 | 63,00,000               |                                |
| Contribution                      | 21,00,000               |                                |
| (-) fixed cost                    | 7,50,000                |                                |
| EBIT                              | 13,50,000               |                                |
| (-) Interest                      | 3,60,000                | $DFL = \frac{EBIT}{EBT}$       |
| (-) Other Interest                | 18,777                  |                                |
| EBT                               | 9,71,223                | $1.39 = \frac{13,50,000}{EBT}$ |
| (-) Tax @ 30 %                    | 2,91,367                | $EBT = 9,71,233$               |
| PAT                               | 6,79,856                |                                |
| (÷) no. of shares                 | 50,000                  |                                |
| EPS                               | 13.5971                 |                                |
| DOL $\frac{Contri}{EBIT}$         | 1.56                    |                                |
| DCL $DFL \times DOL$              | 2.1684                  |                                |
| Earning Yield $= \frac{EPS}{MPS}$ | $= \frac{13.5971}{200}$ | $= 6.7986 \%$                  |

However, student might get different answer if 3,60,000 interest is considered ignoring DFL. Even that answer is acceptable.

Q.28 The following information is available for SS Ltd.

|                              |            |
|------------------------------|------------|
| Profit volume (PV) ratio     | 30 %       |
| Operating leverage           | 2.00       |
| Financial leverage           | 1.50       |
| Loan                         | ₹ 1,25,000 |
| Post tax interest rate       | 5.6%       |
| Tax rate                     | 30%        |
| Market price per share (MPS) | ₹ 140      |
| Price Earnings Ratio (PER)   | 10         |

You are required to :

- Prepare the Profit Loss statement of SS Ltd. and
- Find out the number of Equity shares

Point To Be Noted :

Revise pre tax interest calculation  
 $PE \text{ ratio} = MPS / EPS$

**DON'T FORGET**

Working note : 1)  $DFL = \frac{EBIT}{EBT}$

$$1.5 = \frac{EBIT}{EBT}$$

$$EBT = EBIT - \text{Interest}$$

$$1.5 = \frac{EBIT}{EBT}$$

$$EBT = EBIT - 10,000$$

$$\therefore, EBIT = 30,000$$

\*\*\* Interest Calculation

|     |             |              |
|-----|-------------|--------------|
|     | ?           | 100% Income  |
| 8%. | (-) 30% Tax |              |
|     | 5.6%.       | 70% Post tax |

\* Pre tax interest rate (?)

$$\Rightarrow \frac{5.6}{70} \times 100 = 8\%$$

$$\therefore, \text{Interest} = 1,25,000 \times 8\% \\ = 10,000$$

**सावधान  
इंडिया**

$$2) \quad DOL = \frac{\text{Contri}}{EBIT}$$

$$2 = \frac{\text{Contri}}{30,000}$$

$$\therefore \text{Contribution} = 60,000$$

### 3) Income Statement

| Particulars       | Amt. (₹)  |
|-------------------|---|
| Sales             | 2,00,000 <span style="color: blue;">100%</span> |
| (-) variable cost | (1,40,000)                                      |
| Contribution      | 60,000 <span style="color: blue;">30%</span>    |
| (-) fixed cost    | (30,000)  |
| EBIT              | 30,000  |
| (-) Interest      | (10,000)  |
| EBT               | 20,000  |
| (-) Tax @ 30%     | (6,000)   |
| PAT               | 14,000  |

$$\star \quad P/E \text{ ratio} = \frac{MPS}{EPS}$$

$$10 = \frac{140}{EPS}$$

$$EPS = 14$$

$$\text{no. of shares} = \frac{14,000}{14} \times \frac{PAT}{EPS} = 1,000 \text{ shares}$$

**Q.30** CALCULATE the operating leverage, financial leverage and combined leverage from the following data under Situation I and II and Financial Plan A and B:

|                             |                     |
|-----------------------------|---------------------|
| Installed Capacity          | 4,000 units         |
| Actual Production and Sales | 75% of the Capacity |
| Selling Price               | ₹30 per unit        |
| Variable Cost               | ₹15 per unit        |

Fixed Cost:

|                    |          |
|--------------------|----------|

| Sales             | 90,000               | 90,000 | 90,000               | 90,000 |
| (-) Variable Cost | 45,000               | 45,000 | 45,000               | 45,000 |
| Contribution      | 45,000               | 45,000 | 45,000               | 45,000 |
| (-) fixed Cost    | 15,000               | 15,000 | 20,000               | 20,000 |
| EBIT              | 30,000               | 30,000 | 25,000               | 25,000 |
| (-) Interest      | 2,000                | 1,000  | 2,000                | 1,000  |
| EBT               | 28,000               | 29,000 | 23,000               | 24,000 |
| DOL               | 1.5                  | 1.5    | 1.8                  | 1.8    |
| DFL               | 1.07                 | 1.30   | 1.08                 | 1.04   |
| DCL               | 1.60                 | 1.55   | 1.95                 | 1.87   |

**Q.31** A firm has sales of ₹ 75,00,000 variable cost is 56% and fixed cost is ₹ 6,00,000. It has a debt of ₹ 45,00,000 at 9% and equity of ₹ 55,00,000. You are required to INTERPRET:

- The firm's ROI?
- Does it have favourable financial leverage?
- If the firm belongs to an industry whose capital turnover is 3, does it have a high or low capital turnover?
- The operating, financial and combined leverages of the firm?
- If the sales is increased by 10% by what percentage EBIT will increase?
- At what level of sales the EBT of the firm will be equal to zero?
- If EBIT increases by 20%, by what percentage EBT will increase?

Point To Be Noted: \_\_\_\_\_

$$ROI = \frac{EBIT}{\text{Equity} + \text{Debt}}$$

\* We use EBIT above, as it shows pure profits

| Particulars                | Amt (₹)     |             |
|----------------------------|-------------|-------------|
| Sales                      | 75,00,000   | 22,84,091   |
| (-) variable cost<br>@ 56% | (42,00,000) | (12,79,091) |
| Contribution               | 33,00,000   | 10,05,000   |
| (-) fixed cost             | (6,00,000)  | (6,00,000)  |
| EBIT                       | 27,00,000   | 4,05,000    |
| (-) Interest               | (4,05,000)  | (4,05,000)  |
| EBT                        | 22,95,000   | 0           |

ii)  $ROI = \frac{EBIT}{\text{Equity} + \text{Debt}} = \frac{27,00,000}{55,00,000 + 45,00,000} = 27\%$

ii) The company's ROI is 27% and financial leverage is 9%.  $\therefore$ , company is having favourable financial leverage.

iii) Industry To ratio = 3

$$\therefore, \text{Industry would have} = \frac{(45,00,000 + 55,00,000)}{3} \times 3$$

made sale of = 3,00,00,000

$$\text{Our sale} = 75,00,000$$

Thus, our capital T/O ratio is less.

$$DOL = \frac{\text{Contri}}{EBIT} = \frac{33,00,000}{27,00,000} = 1.222$$

$$DFC = \frac{EBIT}{EBT} = \frac{27,00,000}{22,95,000} = 1.1764$$

$$\begin{aligned} DCL &= DFC \times DOL \\ &= 1.1764 \times 1.2222 \\ &= 1.4379 \end{aligned}$$

$$DOL = \frac{\% \text{ change in EBIT}}{\% \text{ change in Sales}}$$

$$1.222 = \frac{\% \text{ change in EBIT}}{10\%}$$

$$\% \text{ Change in EBIT} = 12.222\%$$

| DOL = $\frac{\text{Contri}}{\text{EBIT}}$ | 1.2963                 |
| DFL = $\frac{\text{EBIT}}{\text{EBT}}$    | 1.125                  |
| DCL = $\text{DFL} \times \text{DOL}$      | 1.4583                 |

**Q.33** The following summarises the percentage changes in operating income, percentage changes in revenues, and betas for four listed firms.

| Firm   | Change in revenue | Change in operating income | Beta |
|--------|-------------------|----------------------------|------|
| A Ltd. | 35%               | 22%                        | 1.00 |
| B Ltd. | 24%               | 35%                        | 1.65 |
| C Ltd. | 29%               | 26%                        | 1.15 |
| D Ltd. | 32%               | 30%                        | 1.20 |

Required:

- CALCULATE the degree of operating leverage for each of these firms. Comment also.
- Use the operating leverage to EXPLAIN why these firms have different beta.

| i) Particulars | DOL                        |
|----------------|----------------------------|
| A Ltd.         | $\frac{22\%}{35\%} = 0.63$ |
| B Ltd.         | $\frac{35\%}{24\%} = 1.46$ |
| C Ltd.         | $\frac{26\%}{29\%} = 0.90$ |
| D Ltd.         | $\frac{30\%}{32\%} = 0.94$ |

It is level specific

iii) High DOL leads to high beta.  
∴, when DOL is 0.63 (least) at that time beta is 1 (minimum) and when DOL is 1.46 (high) at that time beta is 1.65 (maximum)

Working note in content of Q.26

ITC

$$\text{Earning yield} = \frac{10}{220} \times 100$$

$$= 4.5\%$$

RIL

$$\text{Earning yield} = \frac{60}{2500} \times 100$$

$$= 2.4\%$$

Q.11 Betatronics Ltd. has the following balance sheet and income statement information:  
Balance Sheet as on March 31st 2022

| Liabilities               | ₹         | Assets           | ₹         |
|---------------------------|-----------|------------------|-----------|
| Equity share (₹ 10/share) | 8,00,000  | Net Fixed Assets | 10,00,000 |
| 10% debt                  | 6,00,000  | Current assets   | 9,00,000  |
| Retained Earnings         | 3,50,000  |                  |           |
| Current Liabilities       | 1,50,000  |                  |           |
|                           | 19,00,000 |                  | 19,00,000 |

Income Statement for the year ending March 31st 2022

| Particulars  | ₹        |
|--|----------|
| Sales  | 3,40,000 |
| Operating expenses (including ₹ 60,000 depreciation) | 1,20,000 |
| EBIT   | 2,20,000 |

|                     |          |
|---------------------|----------|
| Less: Interest      | 60,000   |
| Earnings before tax | 1,60,000 |
| Less: Taxes         | 56,000   |
| Net Earnings (EAT)  | 1,04,000 |

- (a) DETERMINE the degree of operating, financial and combined leverages at the current sales level, if all operating expenses, other than depreciation, are variable costs.
- (b) If total assets remain at the same level, but sales
- (i) increase by 20 percent and
- (ii) decrease by 20 percent,
- COMPUTE the earnings per share at the new sales level?

*Point To Be Noted:*

| Particulars       | Basic    | ⬆ by 20% | ⬇ by 20% |
|-------------------|----------|----------|----------|
| Sales             | 3,40,000 | 4,08,000 | 2,72,000 |
| (-) variable cost | (60,000) | (72,000) | (48,000) |
| Contribution      | 2,80,000 | 3,36,000 | 2,24,000 |
| (-) fixed Cost    | (60,000) | (60,000) | (60,000) |
| EBIT              | 2,20,000 | 2,76,000 | 1,64,000 |
| (-) Interest      | (60,000) | (60,000) | (60,000) |
| EBT               | 1,60,000 | 2,16,000 | 1,04,000 |
| (-) Tax           | (56,000) | (75,600) | (36,400) |
| PAT               | 1,04,000 | 1,40,400 | 67,600   |
| i) DOL            | 1.27     | 1.21     | 1.36     |
| ii) DFL           | 1.37     | 1.27     | 1.57     |
| iii) DCL          | 1.7399   | 1.5367   | 2.1352   |
| iv) EPS           | 1.3      | 1.755    | 0.845    |

Q.17 From the following details of X Ltd., prepare the Income Statement for the year ended 31st December, 2017:

|  |         |
|--|---------|
| Financial Leverage                     | 2       |
| Interest                               | ₹ 2,000 |
| Operating Leverage                     | 3       |
| Variable cost as a percentage of sales | 75%     |
| Income tax rate                        | 30%     |

## Income Statement

| Particulars       | Amnt (₹) |      |
|-------------------|----------|------|
| Sales             | 48,000   | 100% |
| (-) Variable Cost | (36,000) | 75%  |
| Contribution      | 12,000   | 25%  |
| (-) fixed Cost    | (8,000)  |      |
| EBIT              | 4,000    |      |
| (-) Interest      | (2,000)  |      |
| EBT               | 2,000    |      |
| (-) Tax @ 30%     | (600)    |      |
| PAT               | 1,400    |      |

Working note :

$$DFL = \frac{EBIT}{EBT} = \frac{EBIT}{EBIT - \text{Interest}}$$

$$2 = \frac{EBIT}{EBIT - 2,000}$$

$$2EBIT - 4,000 = EBIT$$

$$\therefore, EBIT = 4,000$$

$$DOL = \frac{\text{Contri}}{EBIT}$$

$$3 = \frac{\text{Contri}}{4,000} \quad \therefore, \text{Contri} = 12,000$$

Practical Q9

**Q.14** The following particulars relating to Navya Ltd. for the year ended 31st March 2021 is given:

|                    |                                   |
|--------------------|-----------------------------------|
| Output             | 1,00,000 units at normal capacity |
| Selling price/unit | ₹ 40                              |
| Variable Cost/unit | ₹ 20                              |
| Fixed cost         | ₹ 1,00,000                        |

The Capital Structure of the Company as on 31st March 2022 is as follows:

| Particulars  | ₹         |
|--|-----------|
| Equity Share Capital (1,00,000 shares of ₹10 each) | 10,00,000 |
| Reserves and Surplus                               | 5,00,000  |
| 7% Debentures                                      | 10,00,000 |
| Current Liabilities                                | 5,00,000  |
| Total  | 30,00,000 |

Navya Ltd. has decided to undertake an expansion project to use the market potential, that will involve ₹ 10 lakhs. The company expects an increase in output by 50%. Fixed cost will be increased by ₹ 5,00,000 and variable cost per unit will be decreased by 10%. The additional output can be sold at the existing selling price without any adverse impact on the market. The following alternative schemes for financing the proposed expansion

programme are planned:

- Entirely by equity shares of ₹10 each at par.
- ₹ 5 lakh by issue of equity shares of ₹ 10 each and the balance by issue of 6% debentures of ₹100 each at par.
- Entirely by 6% debentures of ₹ 100 each at par.

FIND out which of the above-mentioned alternatives would you recommend for Navya Ltd. with reference to the risk and return involved, assuming a corporate tax of 40%.

| Particulars        | Base        | Option 1            | Option 2          | Option 3        |

Q.19 The following data have been extracted from the books of LM Ltd: Sales – ₹100 lakhs

Interest Payable per annum - ₹ 10 lakhs

Operating leverage - 1.2

Combined leverage - 2.16

You are required to calculate:

(a) The financial leverage, (b) Fixed cost and (c) P/V ratio

Point To Be Noted: \_\_\_\_\_

## Income Statement

| Particulars       | Amnt. (₹)   |
|-------------------|-------------|
| Sales             | 1,00,00,000 |
| (-) variable Cost | (73,00,000) |
| Contribution      | 27,00,000   |
| (-) fixed Cost    | (4,50,000)  |
| EBIT              | 22,50,000   |
| (-) Interest      | (10,00,000) |
| EBT               | 12,50,000   |

$$1. \text{ DFL} = \frac{\text{EBIT}}{\text{EBT}} = \frac{\text{EBIT}}{\text{EBIT} - \text{Interest}}$$

$$1.8 = \frac{\text{EBIT}}{\text{EBIT} - 10,00,000}$$

$$\therefore \text{EBIT} = 22,50,000$$

$$2. \text{ DCL} = \text{DOL} \times \text{DFL}$$

$$2.16 = 1.2 \times \text{DFL}$$

$$\therefore \text{DFL} = 1.8$$

$$3. \text{ DOL} = \frac{\text{Contri}}{\text{EBIT}}$$

$$1.2 = \frac{\text{Contri}}{22,50,000}$$

$$22,50,000$$

$$\therefore, \text{Contri} = 27,00,000$$

$$\begin{aligned} 4. P/V \text{ ratio} &= \frac{\text{Contri}}{\text{Sales}} \times 100 \\ &= \frac{27,00,000}{1,00,00,000} \times 100 = 27\% \end{aligned}$$

|        |             |         |                     |

**Q.24** Information of A Ltd. is given below:

Earnings after tax: 5% on sales

Income tax rate: 50%

Degree of Operating Leverage: 4 times

10% Debenture in capital structure: ₹ 3 lakhs

Variable costs: ₹ 6 lakhs

Required:

(i) From the given data complete following statement:

|                         |            |
|-------------------------|------------|
| Sales                   | XXX        |
| Less: Variable costs    | ₹ 6,00,000 |
| Contribution            | XXX        |
| Less: Fixed costs       | XXX        |
| EBIT                    | XXX        |
| Less: Interest expenses | XXX        |
| EBT                     | XXX        |
| Less: Income tax        | XXX        |
| EAT                     | XXX        |

(ii) Calculate Financial Leverage and Combined Leverage.

(iii) Calculate the percentage change in earning per share, if sales increased by 5%

**Point To Be Noted:** \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

$$\begin{aligned} \text{Working note 1: } DOL &= \frac{\text{Contri}}{EBIT} & x &= \text{Sales} \\ 4 &= \frac{x - 6,00,000}{0.1x + 30,000} \\ 0.4x + 1,20,000 &= x - 6,00,000 \\ 0.6x &= 7,20,000 \\ \therefore, x &= 12,00,000 \end{aligned}$$

## Income statement

| Particulars    | Ant (£)         |            |
|----------------|-----------------|------------|
| Sales          | $x$             | 12,00,000  |
| (-) v. cost    | 6,00,000        | (6,00,000) |
| contri         | $x - 6,00,000$  | 6,00,000   |
| (-) fixed cost |                 | (4,50,000) |
| EBIT           | $0.1x + 30,000$ | 1,50,000   |
| (-) Interest   | 30,000          | (30,000)   |
| EBT            | $0.1x$          | 1,20,000   |
| (-) Tax @ 50%  |                 | (60,000)   |
| EAT            | $0.05x$         | 60,000     |

$$DFL = \frac{EBIT}{EBT} = \frac{1,50,000}{1,20,000} = 1.25$$

$$\begin{aligned} DCL &= DFL \times DOL \\ &= 1.25 \times 4 \\ &= 5 \end{aligned}$$

$$DCL = \frac{\% \text{ change in EPS}}{\% \text{ change in Sales}}$$

$$5 = \frac{\% \text{ change in EPS}}{5\%}$$

$\therefore$  % change in EPS : 25 %

Q.27 Details of a company for the year ended 31<sup>st</sup> March 2022 are given below :

|   |            |
|---|------------|
| Sales                                   | ₹ 86 Lakhs |
| Profit Volume (P/V) Ratio               | 35%        |
| Fixed cost excluding interests expenses | ₹ 10 Lakhs |
| 10 % Debt                               | ₹ 55 Lakhs |
| Equity share capital of ₹ 10 each       | ₹ 75 Lakhs |
| Income Tax rate                         | 40 %       |

Required :

- Determine company's Return on capital Employed (Per-tax) and EPS.
- Does the company have favourable financial leverage ?
- Calculate operating and combined leverages of the company
- Calculate percentage change in EBIT, if sales increases by 10%
- At what level of sales the earning before tax (EBT) of company will be equal to zero ?

Point To Be Noted: \_\_\_\_\_

Revise return of Capital Employed  
Pre tax and post tax

| Particulars       | Ant (₹)     |             |
|-------------------|-------------|-------------|
| Sales             | 86,00,000   | 44,28,571   |
| (-) Variable Cost | (55,90,000) | (28,78,571) |
| Contribution @35% | 30,10,000   | 15,50,000   |
| (-) fixed Cost    | (10,00,000) | (10,00,000) |
| EBIT              | 20,10,000   | 5,50,000    |
| (-) Interest      | (5,50,000)  | (5,50,000)  |
| EBT               | 14,60,000   | 0           |
| (-) Tax @40%      | (5,84,000)  |             |
| EAT               | 8,76,000    |             |

$$DOL = \frac{\text{Contri}}{\text{EBIT}} = 1.49$$

$$DFL = \frac{EBIT}{EBT} = 1.37$$

$$DCL = DFL \times DOL$$

$$= 2.04$$

$$\text{Interest} = 5,50,000$$

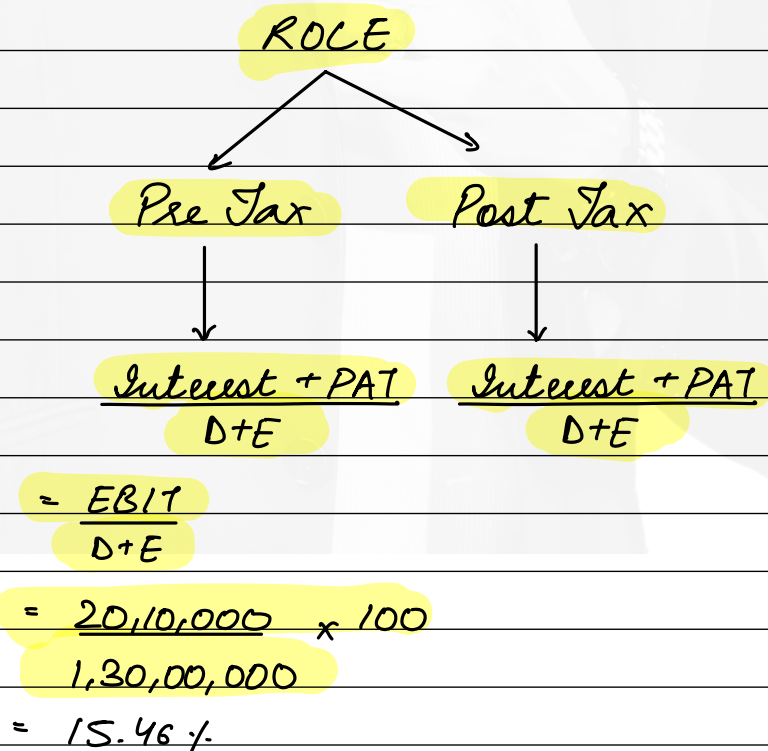

$$EBIT = 20,10,000$$

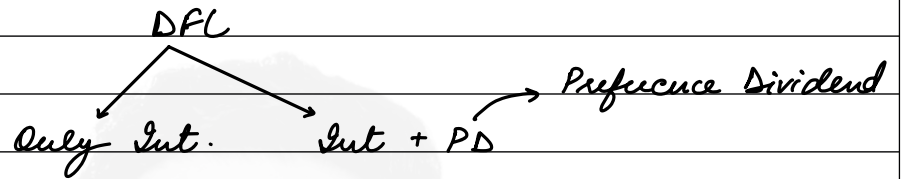

⇒ EBIT is much higher than Interest.  
Hence, financial leverage is favourable.

$$DOL = \frac{\% \text{ change in EBIT}}{\% \text{ change in Sales}}$$

$$1.49 = \frac{\% \text{ change in EBIT}}{10\%}$$

$$\therefore \% \text{ change in EBIT} = 14.9$$

$$DFL = \frac{EBIT}{EBT}$$

$$DFL = \frac{EBIT}{EBIT - \text{Int.} - \frac{PD}{1 - \text{tax}}}$$

$$EBIT = 10,000$$

$$(-) \text{Int.} = \underline{(2,000)}$$

$$EBT \quad 8,000$$

$$(-) \text{Tax @ 50\%} \quad \underline{(4,000)}$$

$$EAT \quad 4,000$$

$$(-) PD \quad \underline{(4,000)}$$

$$\text{Distributable profit} \quad 0$$

\* for interest we require pre tax funds that's why  $2000 = 2000$

for PD we require post tax funds that's why

$$2000 = \frac{2000}{1 - \text{tax}}$$

$$= \frac{2000}{0.5}$$

$$= 4000$$

Q.29 Following information is given for X Ltd. :

|                                    |          |
|------------------------------------|----------|
| Total contribution (₹)             | 4,25,000 |
| Operating leverage                 | 3.125    |
| 15% Preference shares (₹ 100 each) | 1,000    |
| Number of equity shares            | 2,500    |
| Tax rate                           | 50%      |

Calculate EPS of X Ltd, if 40% decreases in sales will results EPS to zero

Point To Be Noted: \_\_\_\_\_

$$DFL = \frac{EBIT}{EBIT - \text{Int.} - \frac{PD}{1 - \text{tax}}}$$

Working note 1-

$$DOL = \frac{\text{Contri}}{EBIT}$$

$$3.125 = \frac{4,25,000}{EBIT} \Rightarrow EBIT = 1,36,000$$

$$\begin{aligned} 2. DCL &= \frac{\% \text{ change in Contrib}}{\% \text{ change in Sales}} \\ &= \frac{100\%}{40\%} = 2.5 \end{aligned}$$

$$\begin{aligned} 3. DCL &= DFL \times DOL \\ 2.5 &= DFL \times 3.125 \\ DFL &= 0.8 \end{aligned}$$

$$\begin{aligned} * 4. 0.8 &= \frac{EBIT}{EBIT - \text{Interest} - PD} \\ &\quad \quad \quad 1 - \text{tax} \end{aligned}$$

$$\begin{aligned} 0.8 &= \frac{1,36,000}{1,36,000 - \text{Int.} - \frac{15,000}{1 - 0.5}} \end{aligned}$$

$$\begin{aligned} 0.8 &= \frac{1,36,000}{1,36,000 - \text{Int.} - \frac{15,000}{0.5}} \\ &\quad \quad \quad 30,000 \end{aligned}$$

$$\therefore \text{Interest} = -64,000$$

Income Statement .

|                   |            |

**Q.40** Debu Ltd. currently has an equity share capital of ₹ 1,30,00,000 consisting of 13,00,000 Equity shares. The company is going through a major expansion plan requiring to raise funds to the tune of ₹ 78,00,000. To finance the expansion the management has following plans:

Plan-I : Issue 7,80,000 Equity shares of ₹ 10 each.

Plan-II : Issue 5,20,000 Equity shares of ₹ 10 each and the balance through long-term borrowing at 12% interest p.a.

Plan-III : Issue 3,90,000 Equity shares of ₹ 10 each and 39,000, 9% Debentures of ₹ 100 each.

Plan-IV : Issue 3,90,000 Equity shares of ₹ 10 each and the balance through 6% preference shares.

EBIT of the company is expected to be ₹ 52,00,000 p.a.

Considering corporate tax rate @ 40%, you are required to-

- CALCULATE EPS in each of the above plans
- ASCERTAIN financial leverage in each plan and comment.

Point To Be Noted:  $\Delta FL (P_D) = \frac{EBIT}{(EBIT - Int.) - \left(\frac{DP}{1 - tax}\right)}$

| Particulars        | Plan I    | Plan II   | Plan III  | Plan IV   |
|--------------------|-----------|-----------|-----------|-----------|
| EBIT               | 52,00,000 | 52,00,000 | 52,00,000 | 52,00,000 |
| (-) Int. 12%       | -         | 3,12,000  | -         | -         |
| (-) Int. 9%        | -         | -         | 3,51,000  | -         |
| EBT                | 52,00,000 | 48,88,000 | 48,49,000 | 52,00,000 |
| (-) Tax @ 40%      | 20,80,000 | 19,55,200 | 19,39,600 | 20,80,000 |
| EAT                | 31,20,000 | 29,32,800 | 29,09,400 | 31,20,000 |
| (-) pref. dividend | -         | -         | -         | 2,34,000  |
| a) net earnings    | 31,20,000 | 29,32,800 | 29,09,400 | 28,86,000 |
| b) no. of shares   | 20,80,000 | 18,20,000 | 16,90,000 | 16,90,000 |
| c) EPS (a/b)       | 1.5       | 1.61      | 1.72      | 1.71      |
| ΔFL                | 1.00      | 1.06      | 1.07      | 1.08*     |

सावधान  
इंडिया

$\Delta FL$  (in case of  
preference dividends)

$$= \frac{EBIT}{(EBIT - Int.) - \left(\frac{DP}{1 - t}\right)}$$

$$= \frac{52,00,000}{(52,00,000 - 0) - \left(\frac{2,34,000}{1 - 0.4}\right)} = 1.08$$

**Q.34** The following information is related to YZ Company Ltd. for the year ended 31st March, 2020:

|                                     |              |
|-------------------------------------|--------------|
| Equity share capital (of ₹ 10 each) | ₹ 50 lakhs   |
| 12% Bonds of ₹ 1,000 each           | ₹ 37 lakhs   |
| Sales                               | ₹ 84 lakhs   |
| Fixed cost (excluding interest)     | ₹ 6.96 lakhs |
| Financial leverage                  | 1.49         |
| Profit-volume Ratio                 | 27.55%       |
| Income Tax Applicable               | 40%          |

You are required to CALCULATE:

- Operating Leverage;
- Combined leverage; and
- Earnings per share.

Show calculations up-to two decimal points.

**Point To Be Noted:** \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

**Answer : :**

**Computation of Profits after Tax (PAT)**

| Particulars                                    | Amount (₹) |
|--|------------|
| Sales  | 84,00,000  |
| Contribution (Sales × P/V ratio)               | 23,14,200  |
| Less: Fixed cost (excluding Interest)          | (6,96,000) |
| EBIT (Earnings before interest and tax)        | 16,18,200  |
| Less: Interest on debentures (12% × ₹37 lakhs) | (4,44,000) |
| Less: Other fixed Interest (balancing figure)  | (88,160)   |
| EBT (Earnings before tax)                      | 10,86,040* |
| Less: Tax @ 40%                                | 4,34,416   |
| PAT (Profit after tax)                         | 6,51,624   |

(i) **Operating Leverage:**

$$\text{Operating Leverage} = \frac{\text{Contribution}}{\text{EBIT}} = \frac{\text{₹ } 23,14,200}{\text{₹ } 16,18,200} = 1.43$$

(ii) **Combined Leverage:**

$$\begin{aligned}\text{Combined Leverage} &= \text{Operating Leverage} \times \text{Financial Leverage} \\ &= 1.43 \times 1.49 = 2.13\end{aligned}$$

Or,

$$\text{Combined Leverage} = \frac{\text{Contribution}}{\text{EBIT}} \times \frac{\text{EBIT}}{\text{EBT}}$$

$$\text{Combined Leverage} = \frac{\text{Contribution}}{\text{EBIT}} = \frac{\text{₹ } 23,14,200}{\text{₹ } 10,86,040} = 2.13$$

$$\text{*Financial Leverage} = \frac{\text{EBIT}}{\text{EBT}} = \frac{\text{₹ } 16,18,200}{\text{₹ } 10,86,040} = 1.49$$

So,  $\text{EBT} = \frac{\text{₹ } 16,18,200}{1.49} = \text{₹ } 10,86,040$

Accordingly, other fixed interest

$$= \text{₹ } 16,18,200 - \text{₹ } 10,86,040 - \text{₹ } 4,44,000 = \text{₹ } 88,160$$

(iii) **Earnings per share (EPS):**

$$= \frac{\text{PAT}}{\text{No. of shares outstanding}} = \frac{6,51,624}{5,00,000 \text{ equity shares}} = \text{₹ } 1.30$$

|        |             |         |           |

| Date : | N.B. Pg. No | Stars : | Nov. 2020 |
|--------|-------------|---------|-----------|

**Q.35** The capital structure of PS Ltd. for the year ended 31st March, 2020 consisted as follows:

| Particulars                                  | Amount in ₹ |
|--|-------------|
| Equity share capital (face value ₹ 100 each) | 10,00,000   |
| 10% debentures (₹ 100 each)                  | 10,00,000   |

During the year 2019-20, sales decreased to 1,00,000 units as compared to 1,20,000 units in the previous year. However, the selling price stood at ₹ 12 per unit and variable cost at ₹ 8 per unit for both the years. The fixed expenses were at ₹ 2,00,000 p.a. and the income tax rate is 30%.

You are required to CALCULATE the following:

- The degree of financial leverage at 1,20,000 units and 1,00,000 units.
- The degree of operating leverage at 1,20,000 units and 1,00,000 units.
- The percentage change in EPS.

**Point To Be Noted:** \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

**Answer ::**

| Sales in units | 1,20,000   | 1,00,000   |
|----------------|------------|------------|
|                | (₹)        | (₹)        |
| Sales Value    | 14,40,000  | 12,00,000  |
| Variable Cost  | (9,60,000) | (8,00,000) |

| Sales in units  | 1,20,000                                  | 1,00,000                              |
|---|---|---------------------------------------|
|   | (₹)                                       | (₹)                                   |
| Contribution  | 4,80,000                                  | 4,00,000                              |
| Fixed expenses  | (2,00,000)                                | (2,00,000)                            |
| EBIT  | 2,80,000                                  | 2,00,000                              |
| Debenture Interest                                    | (1,00,000)                                | (1,00,000)                            |
| EBT   | 1,80,000                                  | 1,00,000                              |
| Tax @ 30%   | (54,000)                                  | (30,000)                              |
| Profit after tax (PAT)                                | 1,26,000                                  | 70,000                                |
| (i) Financial Leverage = $\frac{EBIT}{EBT}$           | $= \frac{₹ 2,80,000}{₹ 1,80,000} = 1.56$  | $= \frac{₹ 2,00,000}{₹ 1,00,000} = 2$ |
| (ii) Operating leverage = $\frac{Contribution}{EBIT}$ | $= \frac{₹ 4,80,000}{₹ 2,80,000} = 1.71$  | $= \frac{₹ 4,00,000}{₹ 2,00,000} = 2$ |
| (iii) Earnings per share (EPS)                        | $= \frac{₹ 1,26,000}{₹ 10,000} = ₹ 12.6$  | $= \frac{₹ 70,000}{₹ 10,000} = ₹ 7$   |
| Decrease in EPS                                       | $= ₹ 12.6 - ₹ 7 = ₹ 5.6$                  |                                       |
| % decrease in EPS                                     | $= \frac{5.6}{12.6} \times 100 = 44.44\%$ |                                       |

**Q.36** Following information has been extracted from the accounts of newly incorporated Textyl Pvt. Ltd. for the Financial Year 2020-21:

|                    |             |
|--------------------|-------------|
| Sales              | ₹ 15,00,000 |
| P/V ratio          | 70%         |
| Operating Leverage | 1.4 times   |
| Financial Leverage | 1.25 times  |

Using the concept of leverage, find out and verify in each case:

- The percentage change in taxable income if sales increase by 15%.
- The percentage change in EBIT if sales decrease by 10%.
- The percentage change in taxable income if EBIT increase by 15%.

**Point To Be Noted :** \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

**Answer : :**

**Workings:**

- Contribution = Sales  $\times$  P/V ratio  
 $= ₹ 15,00,000 \times 70\% = ₹ 10,50,000$
- Operating Leverage =  $\frac{Contribution}{Earnings\ before\ interest\ and\ tax\ (EBIT)}$

$$\text{Or, } 1.4 = \frac{\text{₹ } 10,50,000}{\text{EBIT}}$$

$$\text{EBIT} = \text{₹ } 7,50,000$$

$$3. \quad \text{Financial leverage} = \frac{\text{EBIT}}{\text{EBT}}$$

$$\text{Or, } 1.25 = \frac{\text{₹ } 7,50,000}{\text{EBT}}$$

$$\text{EBT} = \text{₹ } 6,00,000$$

$$4. \quad \begin{aligned} \text{Fixed Cost} &= \text{Contribution} - \text{EBIT} \\ &= \text{₹ } 10,50,000 - \text{₹ } 7,50,000 = \text{₹ } 3,00,000 \end{aligned}$$

$$5. \quad \begin{aligned} \text{Interest} &= \text{EBIT} - \text{EBT} \\ &= \text{₹ } 7,50,000 - \text{₹ } 6,00,000 = \text{₹ } 1,50,000 \end{aligned}$$

6. Income Statement

| Particulars                              | Amount (₹) |
|--|------------|
| Sales                                    | 15,00,000  |
| Less: Variable cost (30% of ₹ 15,00,000) | 4,50,000   |
| Contribution (70% of ₹ 15,00,000)        | 10,50,000  |
| Less: Fixed costs                        | 3,00,000   |
| Earnings before interest and tax (EBIT)  | 7,50,000   |
| Less: Interest                           | 1,50,000   |
| Earnings before tax (EBT)                | 6,00,000   |

$$(i) \quad \text{Combined Leverage} = \frac{\text{Contribution}}{\text{EBT}} = \frac{\text{₹ } 10,50,000}{\text{₹ } 6,00,000} = 1.75 \text{ times}$$

$$\begin{aligned} \text{Or, } \text{Combined Leverage} &= \text{Operating Leverage} \times \text{Financial Leverage} \\ &= 1.4 \times 1.25 = \mathbf{1.75 \text{ times}} \end{aligned}$$

So, if sales is increased by 15% then taxable income (EBT) will be increased by  $1.75 \times 15\% = 26.25\%$

**Verification**

| Particulars   | Amount    |
|---|-----------|
|   | (₹)       |
| New Sales after 15% increase (₹ 15,00,000 + 15% of ₹ 15,00,000) | 17,25,000 |
| Less: Variable cost (30% of ₹ 17,25,000)                        | 5,17,500  |
| Contribution (70% of ₹ 17,25,000)                               | 12,07,500 |
| Less: Fixed costs   | 3,00,000  |
| Earnings before interest and tax (EBIT)                         | 9,07,500  |
| Less: Interest  | 1,50,000  |
| Earnings before tax after change (EBT)                          | 7,57,500  |

$$\text{Increase in Earnings before tax (EBT)} = \text{₹ } 7,57,500 - \text{₹ } 6,00,000 = \text{₹ } 1,57,500$$

So, percentage change in Taxable Income (EBT) =  $\frac{₹ 1,57,500}{₹ 6,00,000} \times 100 = 26.25 \%$ , hence verified.

(ii) Degree of Operating Leverage (Given) = 1.4 times

So, if sales is decreased by 10% then EBIT will be decreased by  $1.4 \times 10\% = 14\%$

#### Verification

| Particulars  | Amount    |
|--|-----------|
|  | (₹)       |
| New Sales after 10% decrease ( ₹ 15,00,000 - 10% of ₹ 15,00,000) | 13,50,000 |
| Less: Variable cost (30% of ₹ 13,50,000)                         | 4,05,000  |
| Contribution (70% of ₹ 13,50,000)                                | 9,45,000  |
| Less: Fixed costs  | 3,00,000  |
| Earnings before interest and tax after change (EBIT)             | 6,45,000  |

Decrease in Earnings before interest and tax (EBIT) = ₹ 7,50,000 - ₹ 6,45,000 = ₹ 1,05,000

So, percentage change in EBIT =  $\frac{₹ 1,05,000}{₹ 7,50,000} \times 100 = 14 \%$ , hence verified.

(iii) Degree of Financial Leverage (Given) = 1.25 times

So, if EBIT increases by 15% then Taxable Income (EBT) will be increased by  $1.25 \times 15\% = 18.75\%$

#### Verification

| Particulars   | Amount (₹) |
|---|------------|
| New EBIT after 15% increase ( ₹ 7,50,000 + 15% of ₹ 7,50,000) | 8,62,500   |
| Less: Interest  | 1,50,000   |
| Earnings before Tax after change (EBT)                        | 7,12,500   |

Increase in Earnings before Tax = ₹ 7,12,500 - ₹ 6,00,000 = ₹ 1,12,500

So, percentage change in Taxable Income (EBT) =  $\frac{₹ 1,12,500}{₹ 6,00,000} \times 100 = 18.75\%$ ,

hence verified.

\_\_\_\_\_

\_\_\_\_\_

**Answer :**

**Income Statement of companies A, B and C**

| Particulars             | A          | B          | C          |
|-------------------------|------------|------------|------------|
| Sales                   | ₹15,00,000 | ₹30,00,000 | ₹41,66,667 |
| Less: Variable Expenses | ₹9,00,000  | ₹15,00,000 | ₹16,66,667 |
| Contribution            | ₹6,00,000  | ₹15,00,000 | ₹25,00,000 |
| Less: Fixed Cost        | ₹4,50,000  | ₹10,00,000 | ₹15,00,000 |
| EBIT                    | ₹1,50,000  | ₹5,00,000  | ₹10,00,000 |
| Less: Interest          | ₹1,00,000  | ₹4,00,000  | ₹6,00,000  |
| PBT                     | ₹50,000    | ₹1,00,000  | ₹4,00,000  |
| Less: Tax @ 30%         | ₹15,000    | ₹30,000    | ₹1,20,000  |
| PAT                     | ₹35,000    | ₹70,000    | ₹2,80,000  |

**Working Notes:**

(i) Degree of Financial Leverage =  $\frac{\text{EBIT}}{\text{EBIT} - \text{Interest}}$

$$\text{DFL} \times (\text{EBIT} - \text{Int}) = \text{EBIT}$$

$$\text{DFL} \times \text{EBIT} - \text{Int} \times \text{DFL} = \text{EBIT}$$

$$\text{DFL} \times \text{EBIT} - \text{EBIT} = \text{Int} \times \text{DFL}$$

$$\text{EBIT} (\text{DFL} - 1) = \text{Int} \times \text{DFL}$$

$$\text{EBIT} = \frac{\text{int} \times \text{DFL}}{\text{DFL} - 1}$$

For A,  $\text{EBIT}_A = \frac{₹ 1,00,000 \times 3}{3 - 1}$

$$\text{EBIT}_A = ₹ 150000$$

For B  $\text{EBIT}_B = \frac{4,00,000 \times 5}{5 - 1}$

$$\text{EBIT}_B = ₹ 500000$$

For C  $\text{EBIT}_C = \frac{₹6,00,000 \times 2.5}{2.5 - 1}$

$$\text{EBIT}_C = 10,00,000$$

(ii)  $\text{DOL} = \frac{\text{Contribution}}{\text{EBIT}}$

$$\text{Contribution} = \text{DOL} \times \text{EBIT}$$

$$\text{Contribution}_A = 4 \times ₹1,50,000$$

$$\text{Contribution}_A = ₹6,00,000$$

$$\text{Contribution}_B = 3 \times ₹5,00,000$$

$$\text{Contribution}_B = ₹15,00,000$$

$$\text{Contribution}_C = 2.5 \times ₹10,00,000$$

$$\text{Contribution}_C = ₹25,00,000$$

(iii)

$$\text{Fixed Cost} = \text{Contribution} - \text{EBIT}$$

$$\text{Fixed Cost}_A = ₹6,00,000 - ₹1,50,000 = ₹4,50,000$$

$$\text{Fixed Cost}_B = ₹15,00,000 - ₹5,00,000 = ₹10,00,000$$

$$\text{Fixed Cost}_C = ₹25,00,000 - ₹10,00,000 = ₹15,00,000$$

(iv)

$$\text{Contribution} = \text{Sales} - \text{VC}$$

$$\text{VC} = \text{Sales} - \text{Contribution}$$

$$\text{Sales} \times \text{VC Ratio} = \text{Sales} - \text{Contribution}$$

$$\text{Contribution} = \text{Sales} - \text{Sales} \times \text{VC Ratio}$$

$$\text{Contribution} = \text{Sales} (1 - \text{VCR})$$

$$\text{Sales} = \frac{\text{Contribution}}{1 - \text{VCR}}$$

$$\text{Sales}_A = ₹6,00,000 / (1 - 0.6) = ₹15,00,000$$

$$\text{Sales}_B = ₹15,00,000 / (1 - 0.5) = ₹30,00,000$$

$$\text{Sales}_C = ₹25,00,000 / (1 - 0.4) = ₹41,66,667$$

Of all the companies, A has the highest degree of Operating Leverage, B has highest degree of Financial Leverage and C is equally leveraged on both Operating and Financial fronts. If we consider combined leverage companies will have the leverages of 12, 15 and 6.25 (by multiplying both operating and financial leverages). This means A is undertaking a higher degree of operating risk while B is undertaking a higher degree of financial risk.

|--------|-------------|---------|----------|

**Q.38** The following particulars relating to Navya Ltd. for the year ended 31st March 2021 is given :

| Output                 | 1,00,000 units at normal capacity |
|------------------------|-----------------------------------|
| Selling price per unit | ₹ 40                              |
| Variable cost per unit | ₹ 20                              |
| Fixed cost             | ₹ 10,00,000                       |

The capital structure of the company as on 31st March, 2021 is as follows:

| Particulars   | ₹         |
|---|-----------|
| Equity share capital (1,00,000 shares of ₹ 10 each) | 10,00,000 |
| Reserves and surplus                                | 5,00,000  |
| 7% debentures                                       | 10,00,000 |
| Current liabilities                                 | 5,00,000  |
| Total   | 30,00,000 |

Navya Ltd. has decided to undertake an expansion project to use the market potential, that will involve ₹ 10 lakhs. The company expects an increase in output by 50%. Fixed cost will be increased by ₹ 5,00,000 and variable cost per unit will be decreased by 10%. The additional output can be sold at the existing selling price without any adverse impact on the market.

The following alternative schemes for financing the proposed expansion programme are planned:

- Entirely by equity shares of ₹ 10 each at par.
- ₹ 5 lakh by issue of equity shares of ₹ 10 each and the balance by issue of 6% debentures of ₹ 100 each at par.
- Entirely by 6% debentures of ₹ 100 each at par.

FIND out which of the above-mentioned alternatives would you recommend for Navya Ltd. with reference to the risk and return involved, assuming a corporate tax of 40%.

| Contribution per. unit (₹) (Selling price - Variable Cost) | <b>20</b>  | <b>22</b>           | <b>22</b>  | <b>22</b>  |
| <b>Contribution (₹ lakh)</b>                               | <b>20</b>  | <b>33</b>           | <b>33</b>  | <b>33</b>  |
| Less: Fixed cost   | 10         | 15                  | 15         | 15         |

| Particulars                             | Existing | Alternative Schemes |                       |         |
|---|----------|---------------------|-----------------------|---------|
|   |          | (i)                 | (ii)                  | (iii)   |
| EBIT                                    | 10       | 18                  | 18                    | 18      |
| Less: Interest (as calculated above)    | 0.7      | 0.7                 | 1.0                   | 1.3     |
| EBT                                     | 9.3      | 17.3                | 17                    | 16.7    |
| Less: Tax (40%)                         | 3.72     | 6.92                | 6.8                   | 6.68    |
| EAT                                     | 5.58     | 10.38               | 10.20                 | 10.02   |
| Operating Leverage (Contribution /EBIT) | 2.00     | 1.83                | 1.83                  | 1.83    |
| Financial Leverage (EBIT/EBT)           | 1.08     | 1.04                | 1.06                  | 1.08    |
| Combined Leverage (Contribution/EBT)    | 2.15     | 1.91                | 1.94                  | 1.98    |
| EPS (EAT/No. of shares) (₹)             | 5.58     | 5.19                | 6.80                  | 10.02   |
| Risk                                    | -        | Lowest              | Lower than option (3) | Highest |
| Return                                  | -        | Lowest              | Lower than option (3) | Highest |

From the above figures, we can see that the Operating Leverage is same in all alternatives though Financial Leverage differs. Alternative (iii) uses the maximum amount of debt and result into the highest degree of financial leverage, followed by alternative (ii). Accordingly, risk of the company will be maximum in these options. Corresponding to this scheme, however, maximum EPS (i.e., ₹ 10.02 per share) will be also in option (iii).

So, if Navya Ltd. is ready to take a high degree of risk, then alternative (iii) is strongly recommended. In case of opting for less risk, alternative (ii) is the next best option with a reduced EPS of ₹ 6.80 per share. In case of alternative (i), EPS is even lower than the existing option, hence not recommended.

**Answer :**

**Income Statement**

| Particulars         | Company P (₹) | Company Q (₹) |
|---------------------|---------------|---------------|
| Sales               | 40,00,000     | 18,00,000     |
| Less: Variable Cost | 30,00,000     | 12,00,000     |
| Contribution        | 10,00,000     | 6,00,000      |

| Particulars      | Company P (₹) | Company Q (₹) |
|------------------|---------------|---------------|
| Less: Fixed Cost | 8,00,000      | 4,50,000      |
| EBIT             | 2,00,000      | 1,50,000      |
| Less: Interest   | 1,50,000      | 1,00,000      |
| EBT              | 50,000        | 50,000        |
| Tax (45%)        | 22,500        | 22,500        |
| EAT              | 27,500        | 27,500        |

**Workings:**

**(i) Margin of Safety**

$$\text{For Company P} = 0.20$$

$$\text{For Company Q} = 0.20 \times 1.25 = 0.25$$

**(ii) Interest Expenses**

$$\text{For Company P} = ₹ 1,50,000$$

$$\text{For Company Q} = ₹ 1,50,000 (1 - 1/3) = ₹ 1,00,000$$

**(iii) Financial Leverage**

$$\text{For Company P} = 4$$

$$\text{For Company Q} = 4 \times 75\% = 3$$

**(iv) EBIT**

**For Company A**

$$\text{Financial Leverage} = \text{EBIT} / (\text{EBIT} - \text{Interest})$$

$$4 = \text{EBIT} / (\text{EBIT} - ₹ 1,50,000)$$

$$4\text{EBIT} - ₹ 6,00,000 = \text{EBIT}$$

$$3\text{EBIT} = ₹ 6,00,000$$

$$\text{EBIT} = ₹ 2,00,000$$

**For Company B**

$$\text{Financial Leverage} = \text{EBIT} / (\text{EBIT} - \text{Interest})$$

$$3 = \text{EBIT} / (\text{EBIT} - ₹ 1,00,000)$$

$$3\text{EBIT} - ₹ 3,00,000 = \text{EBIT}$$

$$2\text{EBIT} = ₹ 3,00,000$$

$$\text{EBIT} = ₹ 1,50,000$$

**(v) Contribution**

**For Company A**

$$\text{Operating Leverage} = 1 / \text{Margin of Safety} = 1 / 0.20 = 5$$

$$\text{Operating Leverage} = \text{Contribution} / \text{EBIT}$$

$$5 = \text{Contribution} / ₹ 2,00,000$$

$$\text{Contribution} = ₹ 10,00,000$$

**For Company B**

$$\text{Operating Leverage} = 1/\text{Margin of Safety} = 1/0.25 = 4$$

$$\text{Operating Leverage} = \text{Contribution}/\text{EBIT}$$

$$4 = \text{Contribution}/₹ 1,50,000$$

$$\text{Contribution} = ₹ 6,00,000$$

(vi) **Sales**

**For Company A**

$$\text{Profit Volume Ratio} = 25\%$$

$$\text{Profit Volume Ratio} = \text{Contribution}/\text{Sales} \cdot 100$$

$$25\% = ₹ 10,00,000/\text{Sales}$$

$$\text{Sales} = ₹ 10,00,000/25\%$$

$$\text{Sales} = ₹ 40,00,000$$

**For Company B**

$$\text{Profit Volume Ratio} = 33.33\%$$

Therefore,

$$\text{Sales} = ₹ 6,00,000/33.33\%$$

$$\text{Sales} = ₹ 18,00,000$$

|               |                    |                |                 |

**Q.40** Debu Ltd. currently has an equity share capital of ₹ 1,30,00,000 consisting of 13,00,000 Equity shares. The company is going through a major expansion plan requiring to raise funds to the tune of ₹ 78,00,000. To finance the expansion the management has following plans:

Plan-I : Issue 7,80,000 Equity shares of ₹ 10 each.

Plan-II : Issue 5,20,000 Equity shares of ₹ 10 each and the balance through long-term borrowing at 12% interest p.a.

Plan-III : Issue 3,90,000 Equity shares of ₹ 10 each and 39,000, 9% Debentures of ₹ 100 each.

Plan-IV : Issue 3,90,000 Equity shares of ₹ 10 each and the balance through 6% preference shares.

EBIT of the company is expected to be ₹ 52,00,000 p.a.

Considering corporate tax rate @ 40%, you are required to-

- CALCULATE EPS in each of the above plans
- ASCERTAIN financial leverage in each plan and comment.
